
e² studio 6.1.0

R20UT4191EE0100

Rev.1.00

Release Note

October 16th, 2017

Introduction

This document outlines the device support, new features added in 6.1.0, fixed issues and open issues in e² studio 6.1.0.

Contents

1. Product Information	2
1.1 Supported Operating Systems	2
1.2 Supported Toolchains	2
2. Device Support	3
2.1 Project Generator Support	3
2.2 Code Generator Support	9
3. Smart Manual Support	12
4. What is new in 6.1.0?	13
5. What is new in 6.0.0?	16
6. Useful workarounds and information for 6.1.0.....	28
7. Open Issues in 6.1.0.....	36
8. Appendix.....	37
8.1 Website and Support	37

1. Product Information

1.1 Supported Operating Systems

These operating systems are officially supported by e² studio:

- Windows 7 32-bit
- Windows 7 64-bit
- Windows 8.1 32-bit
- Windows 8.1 64-bit
- Windows 10 32-bit
- Windows 10 64-bit

1.2 Supported Toolchains

The following toolchains are supported in e² studio 6.1.0.

	Renesas	Launchpad GCC (*2)	Renesas GCC/ KPIT GCC (*3)	IAR (*4)	Green Hills (*5)
RL78	Yes (CC-RL)	No	Yes	Yes	No
RX	Yes (CC-RX)	No	Yes	Yes	No
RH850	No	No	No	Yes	Yes
RZ/ARM	No	No (*1)	Yes	Yes	No
Synergy/ARM	No	Yes	No	Yes	No

Note:

*1: Converter is now available to convert RZ ARM-none GCC toolchain to use Launchpad GCC.

*2: The GNU Launchpad toolchain is distributed via the www.launchpad.net website and is available here: <https://launchpad.net/gcc-arm-embedded>.

*3: Legacy KPIT GCC toolchains are now available from www.renesas-gcc.com. In addition, the latest RX and RL Renesas GCC toolchains are available from this website.

*4: The IAR toolchain plugins are available via the “Help”->”IAR Embedded Workbench plugin manager” menu in e² studio. These Eclipse plugins are provided by IAR and are not supported by Renesas.

*5: The Green Hills toolchain plugins are available within the e² studio product. These plugins are provided by Green Hills and are not supported by Renesas.

2. Device Support

2.1 Project Generator Support

Note: The Renesas SH device family is no longer supported in e2 studio.

CPU	Family	Devices
EC-1	EC-1	R9A06G043
	C1H	R7F701260, R7F701270,(Debug Support Only)
	C1M	R7F701263, R7F701271,(Debug Support Only)
	E1L	R7F701201, R7F701205,(Debug Support Only)
	E1M-S	R7F701202, R7F701204,(Debug Support Only)
	-	R7F701Z05, R7F701Z06, R7F701Z07,(Debug Support Only)
	F1H	R7F701501, R7F701502, R7F701503, R7F701506, R7F701507, R7F701508, R7F701511, R7F701512, R7F701513,(Debug Support Only)
	F1H-GW	R7F701521, R7F701522, R7F701524, R7F701525,(Debug Support Only)
	F1K	R7F701542, R7F701543, R7F701546, R7F701547, R7F701557, R7F701560, R7F701561, R7F701562, R7F701563, R7F701566, R7F701567, R7F701577, R7F701580, R7F701581, R7F701582, R7F701583, R7F701586, R7F701587, R7F701597, R7F701602, R7F701603, R7F701610, R7F701611, R7F701612, R7F701613, R7F701620, R7F701621, R7F701622, R7F701623,(Debug Support Only)
	RH850	R7F701002xAFP, R7F701003xAFP, R7F701006xAFP, R7F701007xAFP, R7F701008xAFP, R7F701009xAFP, R7F701010xAFP, R7F701011xAFP, R7F701012xAFP, R7F701013xAFP, R7F701014xAFP, R7F701015xAFP, R7F701016xAFP, R7F701017xAFP, R7F701018xAFP, R7F701019xAFP, R7F701020xAFP, R7F701021xAFP, R7F701022xAFP, R7F701023xAFP, R7F701024xAFP, R7F701025xAFP, R7F701026xAFP, R7F701027xAFP, R7F701028xAFP, R7F701029xAFP, R7F701030xAFP, R7F701032xAFP, R7F701033xAFP, R7F701034xAFP, R7F701040, R7F701041, R7F701042, R7F701043, R7F701044, R7F701045, R7F701046, R7F701047, R7F701048, R7F701049, R7F701050, R7F701051, R7F701052, R7F701053, R7F701054, R7F701055, R7F701056, R7F701057,(Debug Support Only)
	F1L	R7F701544, R7F701545, R7F701548, R7F701549, R7F701552, R7F701553, R7F701564, R7F701565, R7F701568, R7F701569, R7F701572, R7F701573,(Debug Support Only)
	F1M	R7F701304, R7F701305, R7F701310, R7F701311, R7F701312, R7F701313, R7F701314, R7F701315, R7F701318, R7F701319, R7F701320, R7F701321, R7F701322, R7F701323,(Debug Support Only)

3. Smart Manual Support

Smart manual support is delivered independently of e² studio releases when available. The following devices are available as of the 27th of July, 2017.

- RX62G
- RX62T
- RX63N
- RX63T
- RX64M
- RX71M
- RX110
- RX111
- RX113
- RX210
- RX220
- RX631
- RX651
- RX65N
- RX24U
- RX24T
- RL78/L12
- RL78/L13
- RL78/G14
- RL78/G13
- RL78/G12
- RL78/G11
- RL78/G10
- RL78/G1F

4. What is new in 6.1.0?

Component	Device	Description
RZ/G Debugging	RZ/G	When installing the RZ/G feature the Trace Compass and Ltng plugins are now also installed.
RZ/G Toolchain integration	RZ/G	This will enable Linux OS trace support when debugging Linux target. Linaro GCC version 5.2 is now supported for RZ/G.
Stack Analysis	All	Support within the Stack Analysis plugin has been added for GCC toolchains.
DS-5 Converter	RZ	Support for the ARM DS-5 project converter has been added back into the product. It is available in the standard Import Eclipse system and can be accessed from "File->Import..."

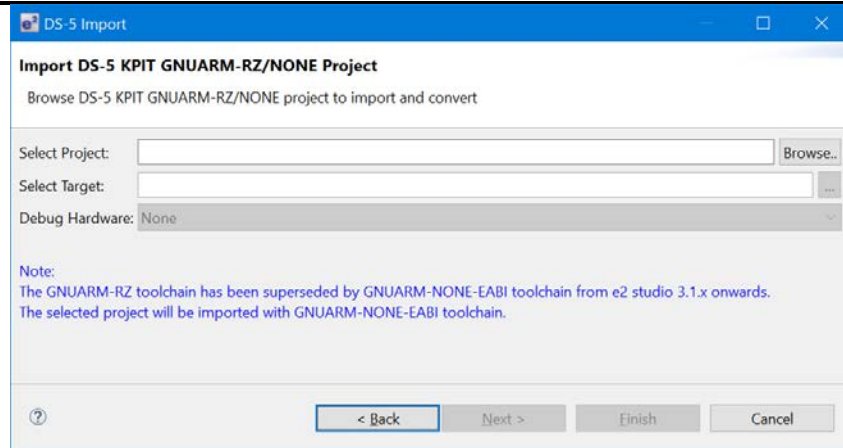

This importer will migrate the toolchain to the Launchpad GNU ARM toolchain. This can be downloaded from [here](#).

This feature can import from the following IDE/toolchain combinations:

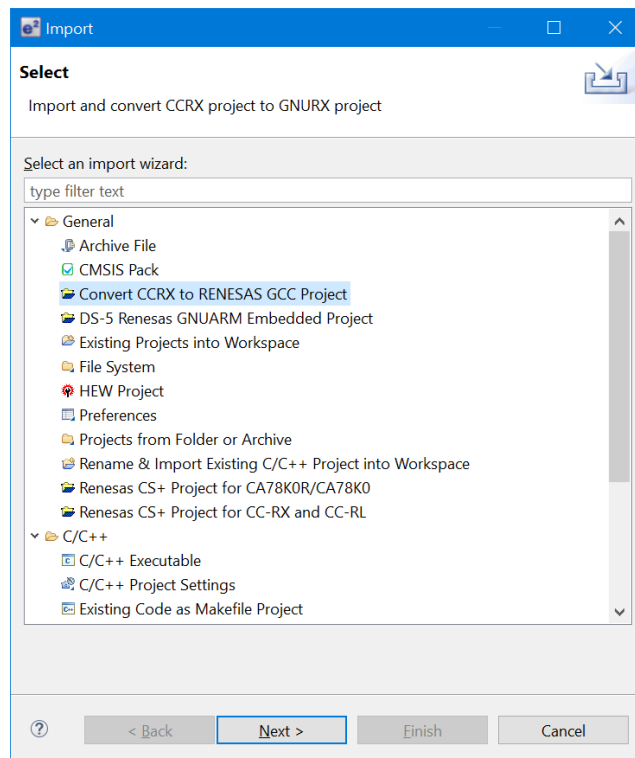

- ARM DS-5 project with a KPIT RZ GCC Toolchain.
- ARM DS-5 project with a KPIT ARM-None GCC Toolchain.

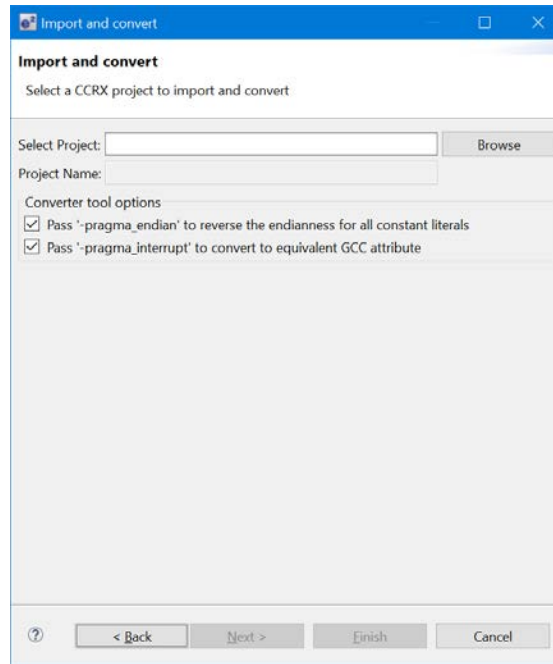

The project once converted may not build and operate perfectly for a list of known issues with the conversion please see the latest open issue list [here](#):

CCRX to RX
GCC Project
Converter

Support for the CCRX to GCC project converter has been added back into the product. It is available in the standard Import Eclipse system and can be accessed from “File->Import...”

There is no guarantee that the project once converted will build and operate perfectly. For a list of known issues with the conversion please see the latest open issue list [here](#):

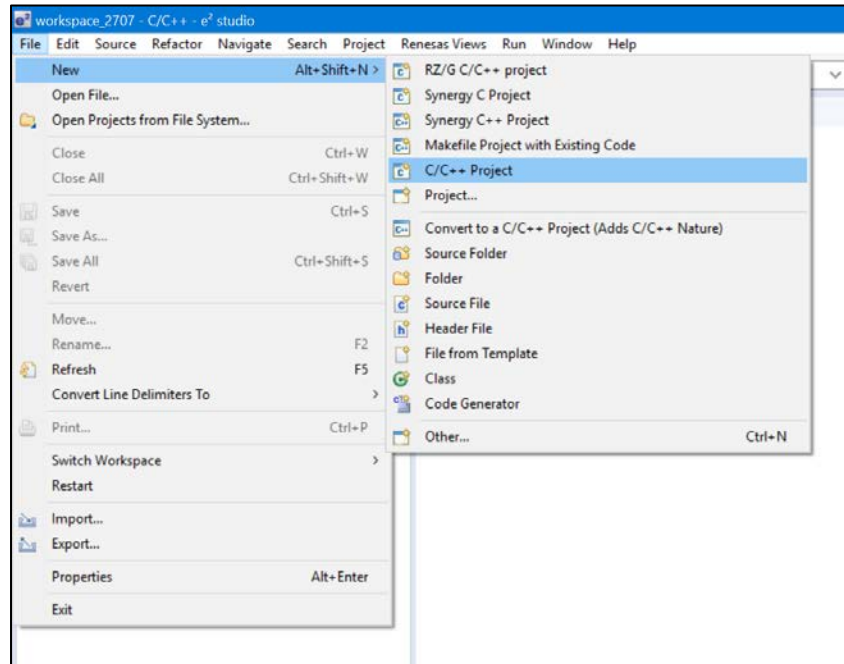

MISRA-C Settings	RX, RL	The MISRA-C plugin settings have been moved from the workspace location to the project location. This enables the settings to be shared among users of the same project.
Visual Expressions	All	The Visual Expressions plugin settings have been moved from the workspace location to the project location. This enables the settings to be shared among users of the same project.
Memory Usage	RZ	The memory usage view has been enhanced to support GCC ARM Embedded toolchain.

5. What is new in 6.0.0?

Note: This section is reserved for the new users migrated to 6.0/6.1 from 5.x or earlier versions of e² studio.

Component	Device	Description
Project Generation	All	The project generation tools in 6.0 have been revised and the look and feel improved.

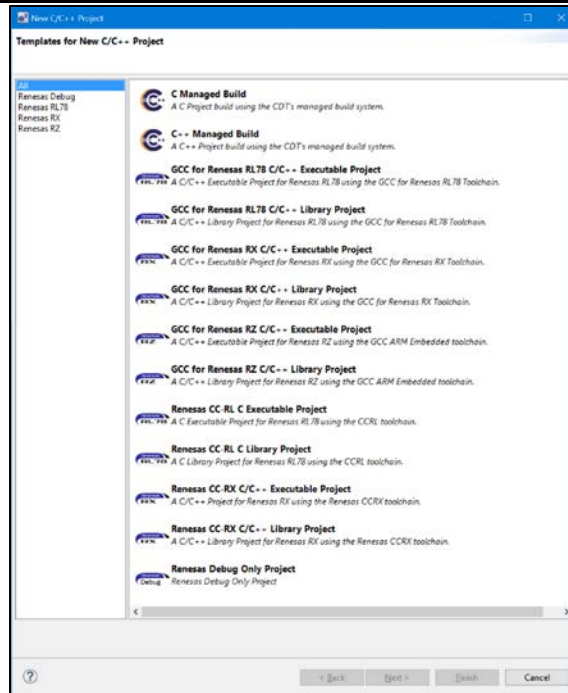

The new generator is accessed via the C/C++ Project.

The RZ/G project generator is accessed from the RZ/G C/C++ Project menu item in the same manner as 5.x.

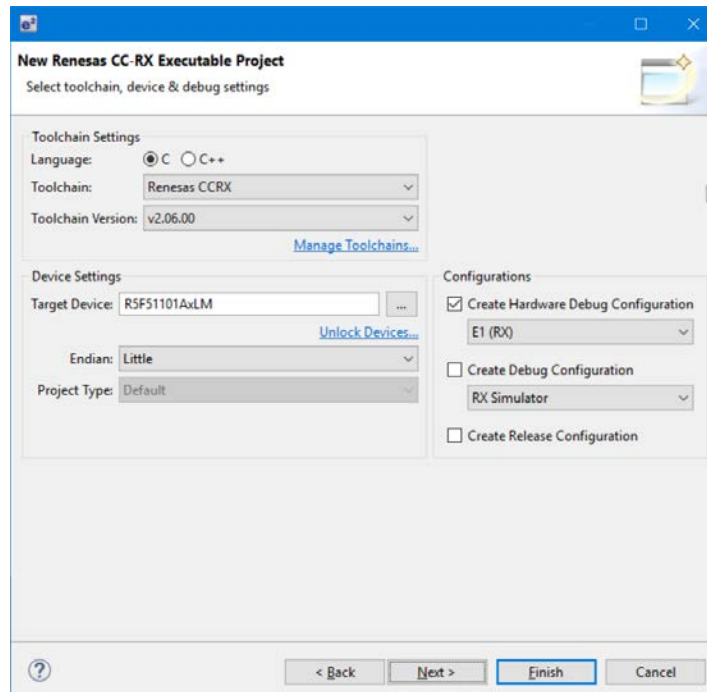

The Synergy project generators are accessed from Synergy C Project or Synergy C++ Project in the same manner as 5.x.

When selecting the C/C++ Project wizard the following dialog is shown

Note the C Managed Build and C++ Managed Build types are default CDT projects. Please use the Renesas project types for the device you wish to use. There are separate entries for each device, toolchain and project type (Executable or Library) combination.

The actual wizard to create the projects also has an updated look and feel. The functionality provided is very similar to 5.x.

When the project is created all generated files are stored within the project in the "generate" folder. This is to make it clearer which files within the project were provided by the project generator.

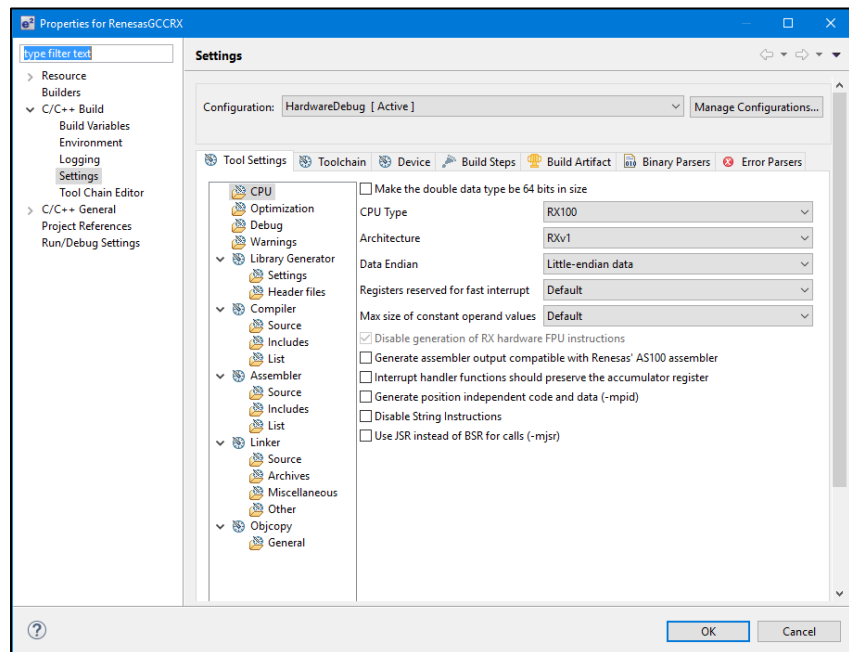

Revised Builder components

The builder components within e2 studio 6.0 have been overhauled and updated to work well with the latest CDT.

The affected toolchains are CCRX, CCRL, GCC RX and GCC RL. For information on migration of old projects please see the useful information and workarounds section.

In addition the GCC ARM toolchain being used for RZ development has been migrated to now use the gnuarmeclipse open source plugins that are already in use for Synergy.

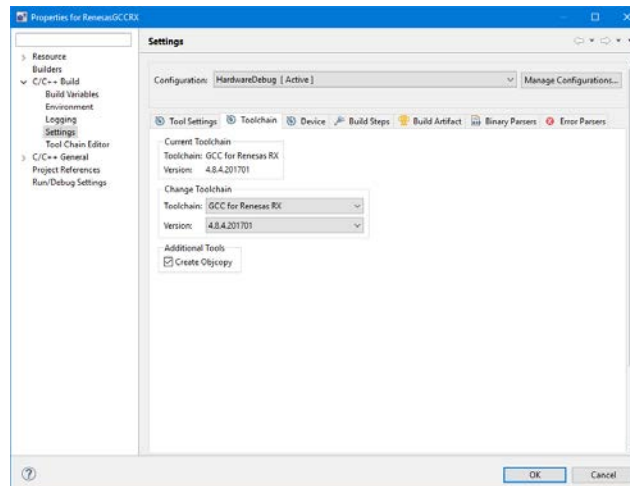

The new settings dialog are available from the C/C++ Build, Settings page within the project properties. See below:

The look and feel for each toolchain is similar to before but there are some considerations worth noting:

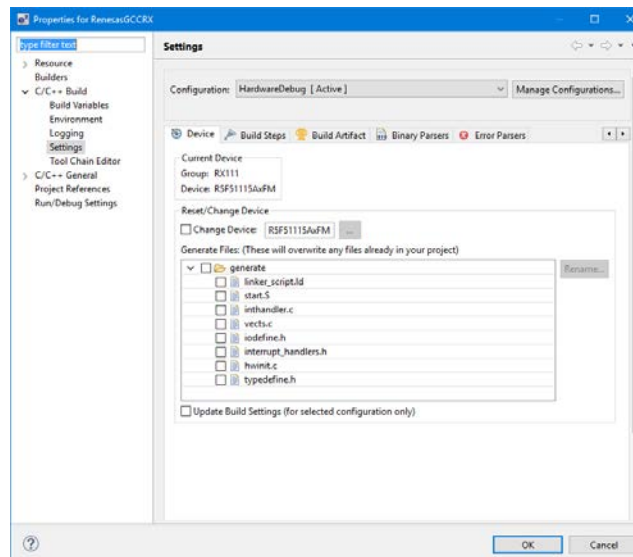

1. The Toolchain tab

- This tab controls the selected toolchain and version. The “Change toolchain version” functionality present in previous e2 studio versions has been removed and replaced with this.
- In addition extra tools such as “Objcopy” or “Libgen” can be enabled on this tab. When enabling the checkbox for the tools they will only then appear in the builder settings.

2. The Device tab

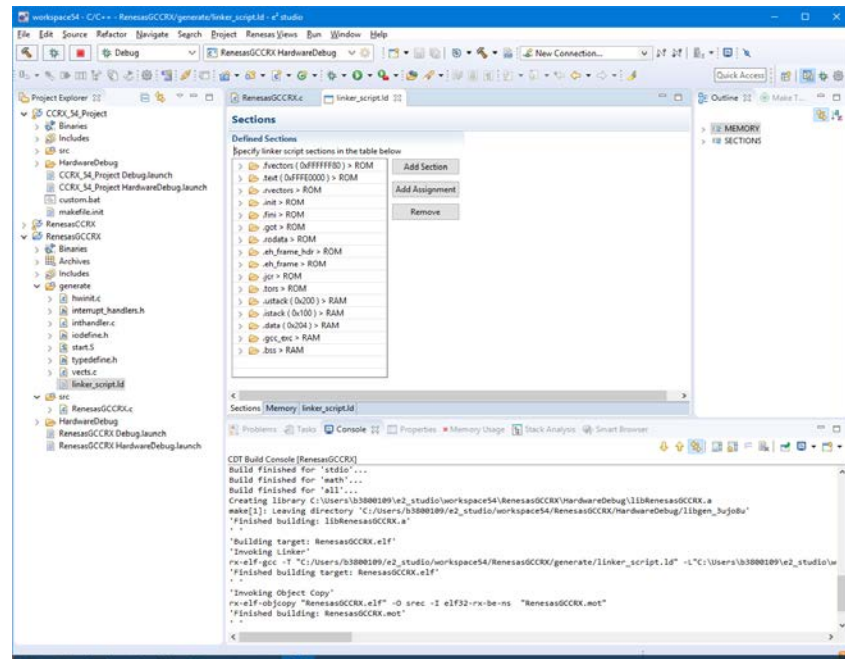

- Previous versions of e2 studio had a special preference page for the currently selected device. This has been removed and an additional tab named “Device” has been added to the build settings.
- Here it is possible to change the device, re-generate project generation files and update the build settings accordingly.

3. Linker section changes

- For CCRX and CCRL the linker sections are represented as a single string. The section editor is not shown on the settings page. To access the graphical section editor press the “...” button.
- For all GCC tools there is no longer a graphical section editor integrated into the settings user interface for the GCC build plugins.

- Instead it uses the .ld linker script directly. A special graphical editor of .ld files has been integrated within the e2 studio. Simply double click the .ld file in the project and you can again edit the sections graphically.

4. Renesas Quick Settings menu item

- In previous versions of e2 studio there has been a menu named “Renesas Quick Settings”.
- This menu item used to take you directly to the build settings for the selected project.
- This functionality cannot be implemented in e2 studio 6.0 so the menu item has been removed.

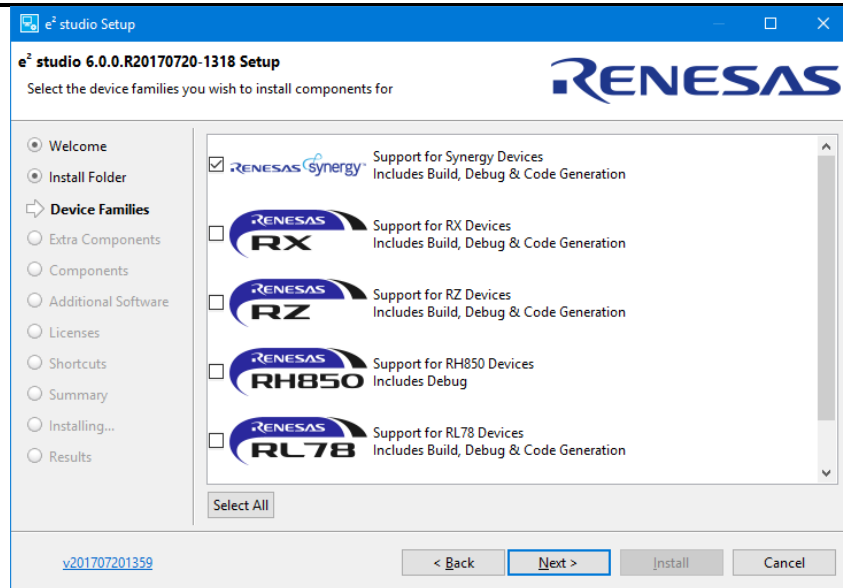

Installer

All

The e2 studio product structure has been enhanced so that each device can be installed in its own independent way.

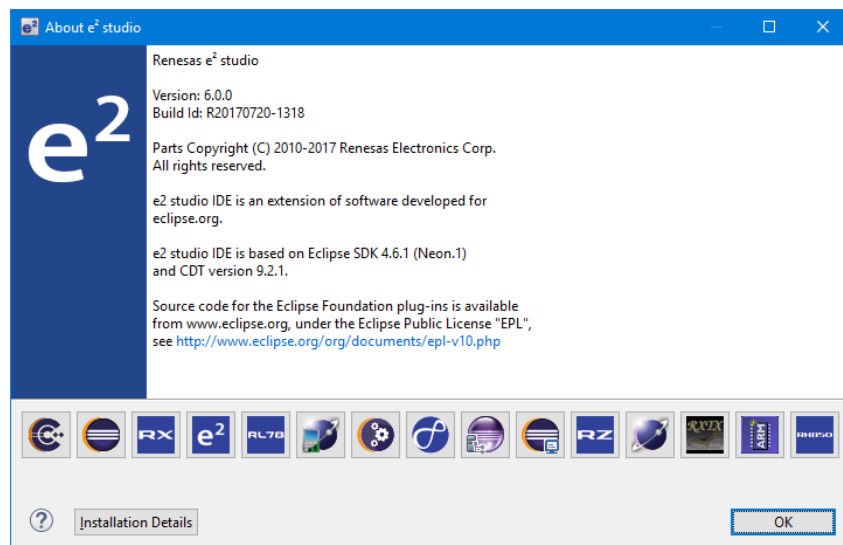

Each device’s support is versioned independently from the main 6.0 product. It means that updates to one device will not affect the other devices.

The installer allows you to select this at installation time.

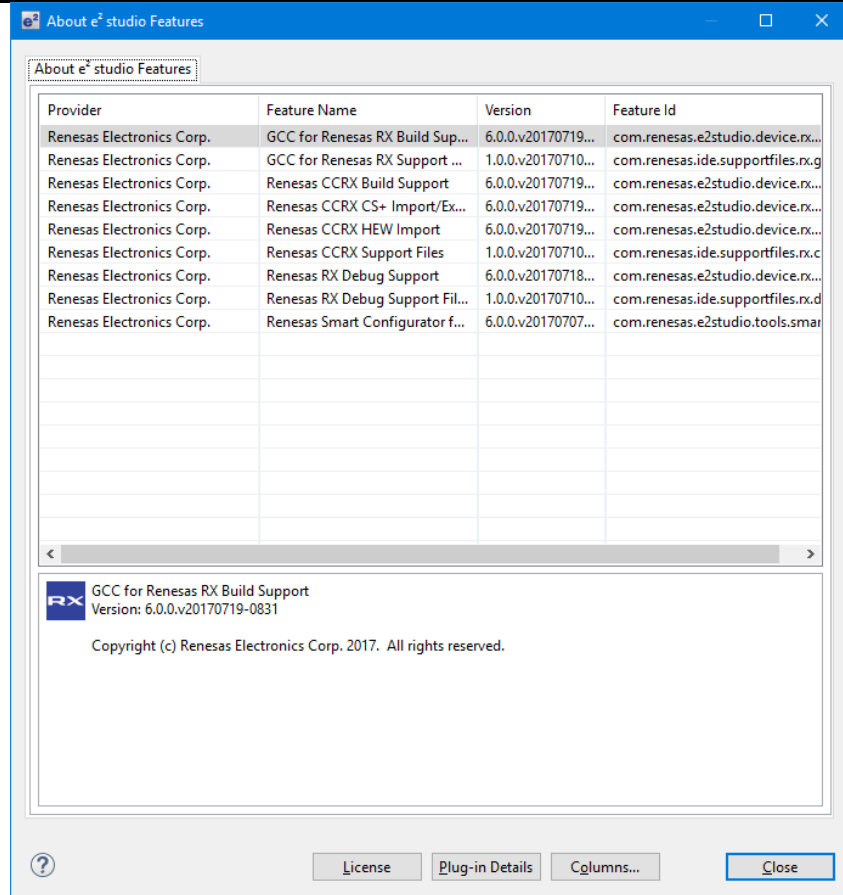

The above example shows a user only installing the Synergy device family. Subsequent updates of other device families will not affect this installation unless the main core of the product is also updated.

To see the version of your installed device feature you can visit the About Box.

Clicking on the device will give the installed versions of components for this device. e.g. In the example below RX was clicked:

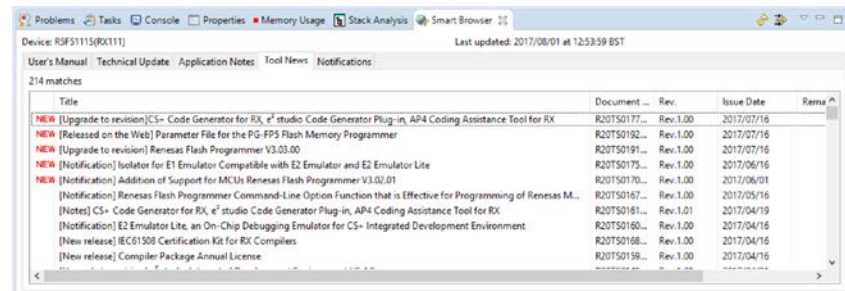

This version information will be valuable if you need to discuss problems you encounter with Renesas technical support contacts.

Updated user interface	All	Some changes have been made to the e2 studio 6.0 user interface to improve the usability of the user interface. The most major improvement is the introduction of the Launch Bar.
<p>This launch bar allows you to very clearly understand what will happen when the build and debug buttons are pressed. The selected project and debug configuration in the drop list will provide the context for the operation.</p>		
<p>In addition the debug toolbar buttons have been switched off from the debug view and added to the main debug toolbar.</p>		
RZ Semi hosting	RZ	When using the RZ debugger in previous e2 studio semi hosting was supported but did not fully support the SYS mode. This mode of operation is now supported in the e2 studio 6.0 RZ debugger when using the Segger J-link emulator.

Smart
Browser

All

The Smart Browser has been enhanced to show when updates are available for items shown within the user interface.

When items such as updates to documents or new tool news information are available a notification bubble will be displayed informing you that new items are available.

RTOS
Graphical
Stack Usage

Synergy

Stack usage is now shown in a graphical way when using the Partner OS plugin and ThreadX.

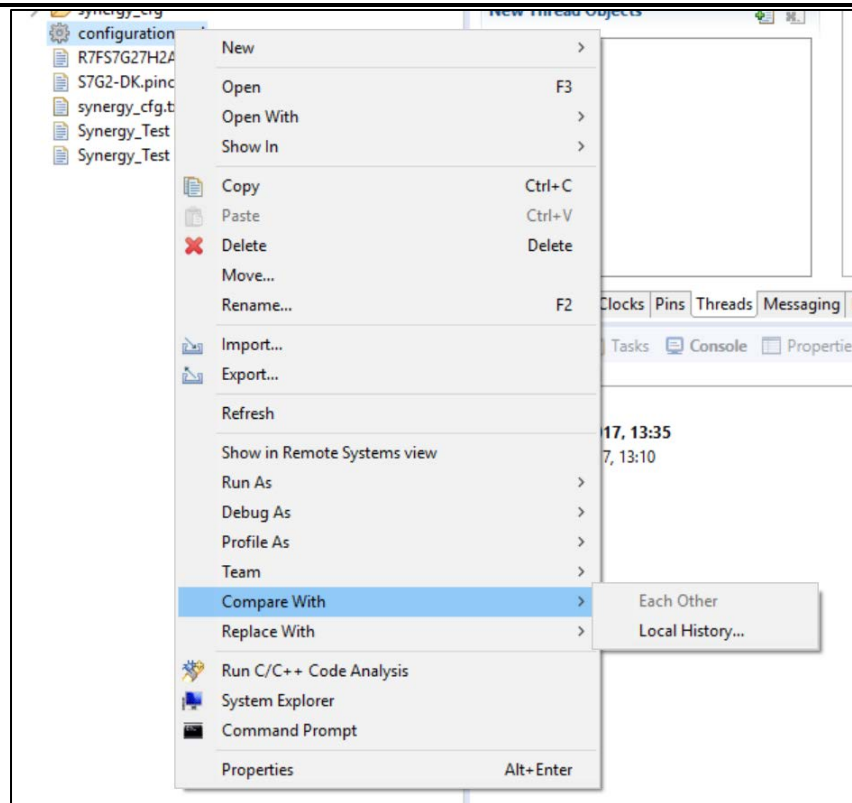

XML
Comparison

Synergy
and RX,
RZ

e² studio now has a XML file comparison tool built into the UI. This can be used for the configuration.xml files in the Synergy editor and the Smart Configurator.

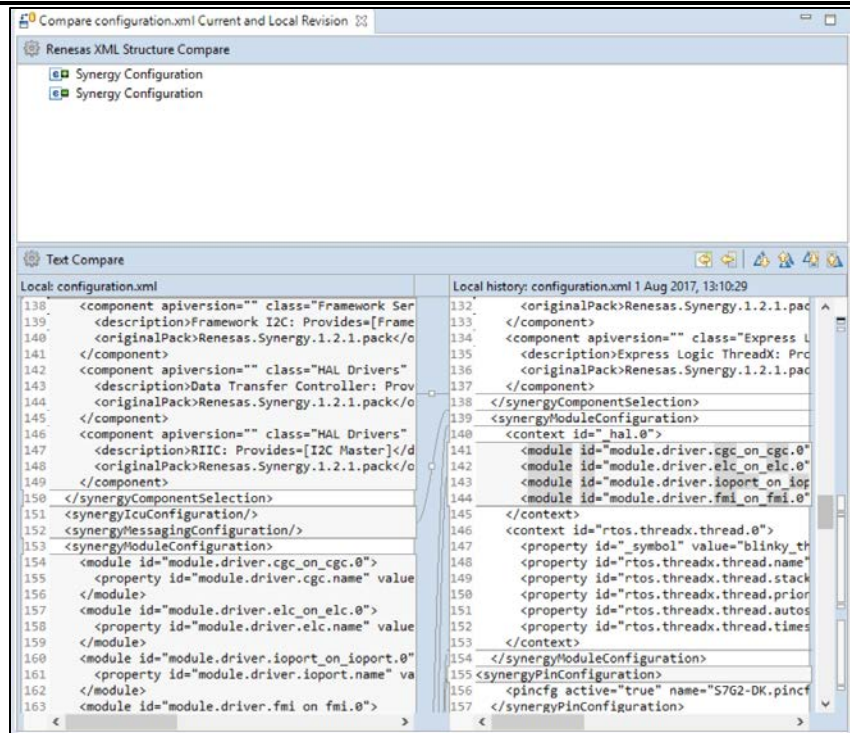

Right click on the file in the project tree that needs comparison and select "Compare With->Local History..."

The following dialog is then displayed:

These are the list of revisions of the file that was selected in the project tree. Double clicking an instance of the file will then compare with the current version on disk. A difference window is shown showing the differences:

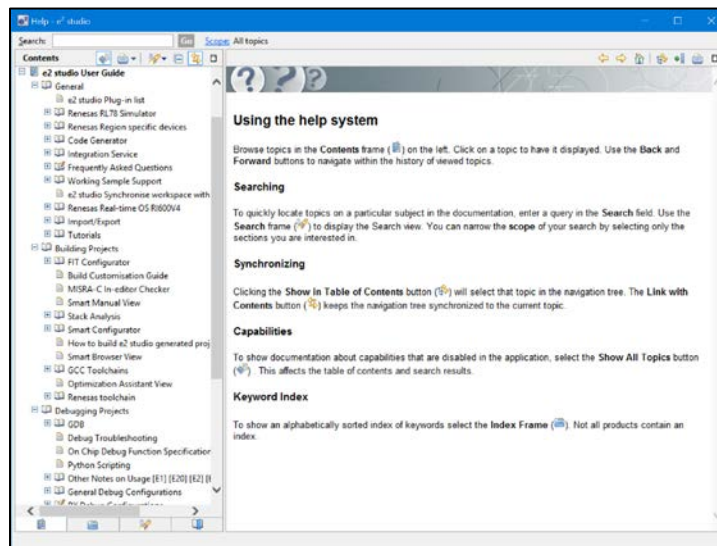

Help System

All

The help system in previous versions of e2 studio was not well organised which meant finding topics was not easy.

In e2 studio 6.0 the help has been re-structured to make it easier to find what you are looking for. See below:

Smart Configurator

RX, RZ

The main feature improvements for Smart Configurator in e2 studio 6.0 include:

- Code Generator driver support for RX64M [37 components]
- CG driver support for RX65N/1 (+2MB devices) [37 components]

- CG driver support for RX130 (+512KB devices) [35 components]

E2 Emulator RL78 E2 emulator support has been added to e2 studio 6.0. This emulator offers all the same functions as the E1 emulator.

It also offers:

- Consumption current measurement support.
- External trigger support.

The Consumption current measurement shows graphically the current drawn by the board.

It allows monitor points to be set which are shown on this view as markers. This allows you to tie the source code to specific power consumption.

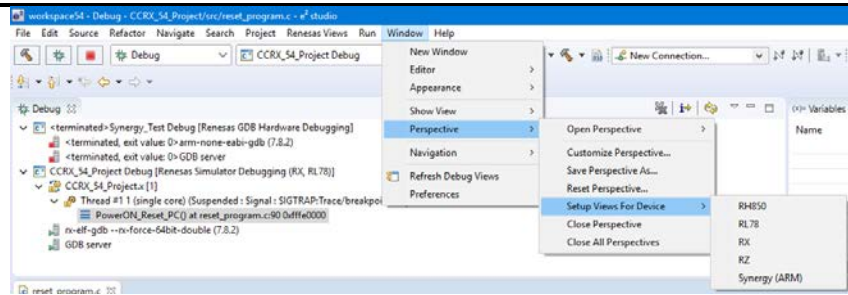

Application All e2 studio has many debug views and not all are supported for all device families.

This can cause confusion so a new feature has been added to close debug views that are not supported by the current debug session.

This is available from the Window menu under the Perspective menu. Selecting the device will close all windows not supported by that device.

Note this menu item is only available in the debug perspective.

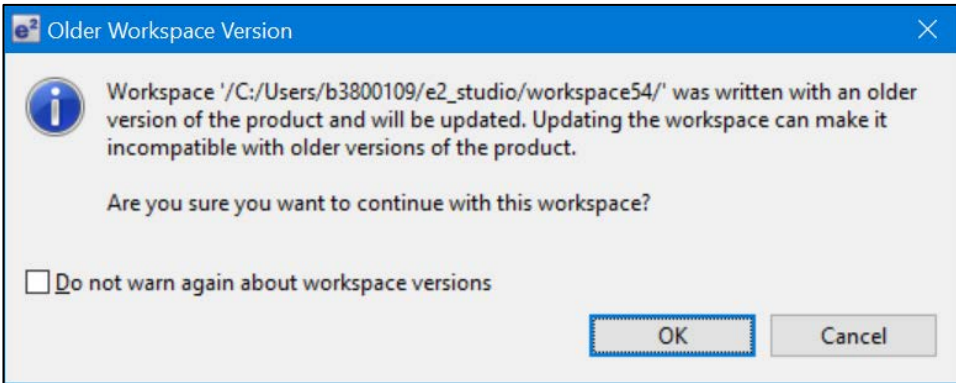

Enhanced Threads Page Synergy The Synergy threads page has had the following enhancements made to it:

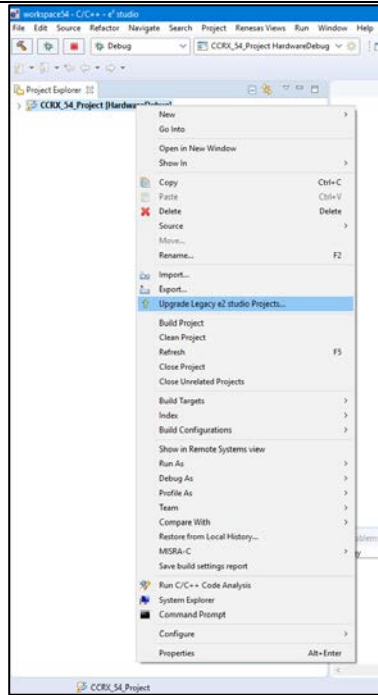

- Keyboard navigation within the module stack viewer
- Renaming threads will refactor code accordingly

6. Useful workarounds and information for 6.1.0

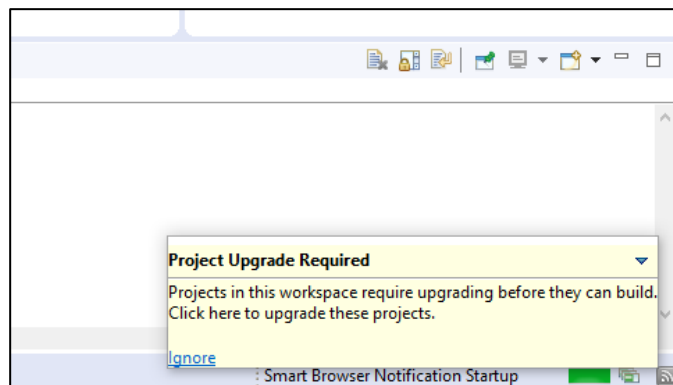

Please visit the Renesas FAQ for e² studio for the latest up to date information:

[Online FAQ link.](#)

ID	Component	Workaround or information
	Application	<p>This version of e² studio is based on Eclipse Neon.1 and CDT 9.2.1. This release note does not describe the Eclipse framework and CDT plugin issues and fixes. You can find the detailed information on the sites below:</p> <p>For information on the Neon release see here: https://projects.eclipse.org/releases/neon</p> <p>CDT: Has been significantly improved and this version contains a major version up over 5.4: Please see New and Noteworthy for CDT here: https://wiki.eclipse.org/CDT/User/NewIn90 https://wiki.eclipse.org/CDT/User/NewIn91 https://wiki.eclipse.org/CDT/User/NewIn92</p> <p>The Eclipse bug tracker is here: https://bugs.eclipse.org/bugs/</p>
	SH support	<p>The Renesas SH device family is no longer supported in e2 studio.</p> <p>If you need to use the SH device support please use e2 studio 5.4 or earlier.</p>
	Importing old projects into 6.x	<p>All projects being migrated into e2 studio 6.0 from previous e2 studio versions will need to be migrated to the new builder plugins. The new builder plugins have different user interface pages and different option IDs.</p> <p>Upon opening an older workspace the following dialog would be displayed:</p>  <p>Clicking OK will update the workspace to e2 studio 6.0.</p> <p>Importing an existing project to the workspace or opening a workspace with old projects will automatically start the legacy project upgrade procedure.</p> <p>If for some reason this process does not start it is also possible to launch the “Upgrade Legacy of e2 studio Projects...” from the project context menu.</p>

The automatic system pops up a message bubble in the bottom left of the e2 studio application window.

After selecting the menu item or clicking the bubble the following dialog will be shown:

To upgrade the project, click the corresponding check box and then click Finish. Note, this will update the project to the latest build plugins and options. Before doing this you should ensure your project is backed up as this operation is not reversible.

It is possible to upgrade multiple projects in a single operation.

For the GCC toolchains for RX and RL changes have been made to the build options which mean we cannot guarantee the same binary output after upgrade. Please consider this before upgrading to 6.0.

For the GNUARM-NONE toolchain projects, they can be converted to 6.0 project but options and configuration might not be migrated exactly the same as original project. Please consider using 5.x in the meantime if you have any difficulty in migrating to 6.0, or create a new project on 6.0 environment.

Another consideration for migration is that debug configurations when opened in 6.0 will also need to be migrated. The following message will be displayed.

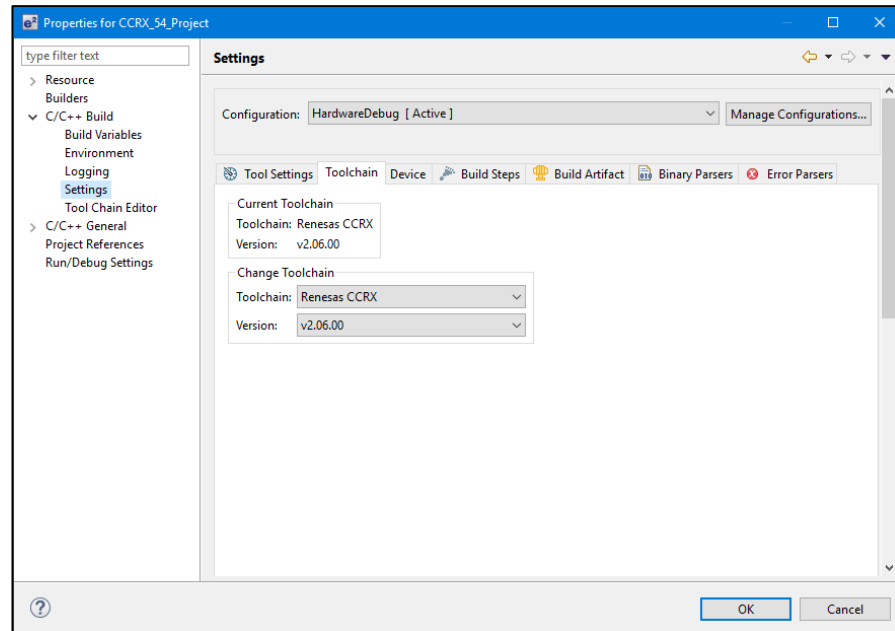

Please ensure that your projects are backed up or in revision control before migration allowing you to return to older versions if required.

Toolchain Management Before e2 studio 6.0 the toolchain management facility automatically upgraded or downgraded the imported project to the latest tools installed on the host machine.

This no longer happens in e2 studio 6.0. Instead the toolchain remains the same and user operation is the only way to change the toolchain version.

This operation is now available within the build settings on the toolchain tab. An example of CCRX is shown below:

If the particular toolchain version does not exist and build is performed then an error message is displayed and the build will fail.

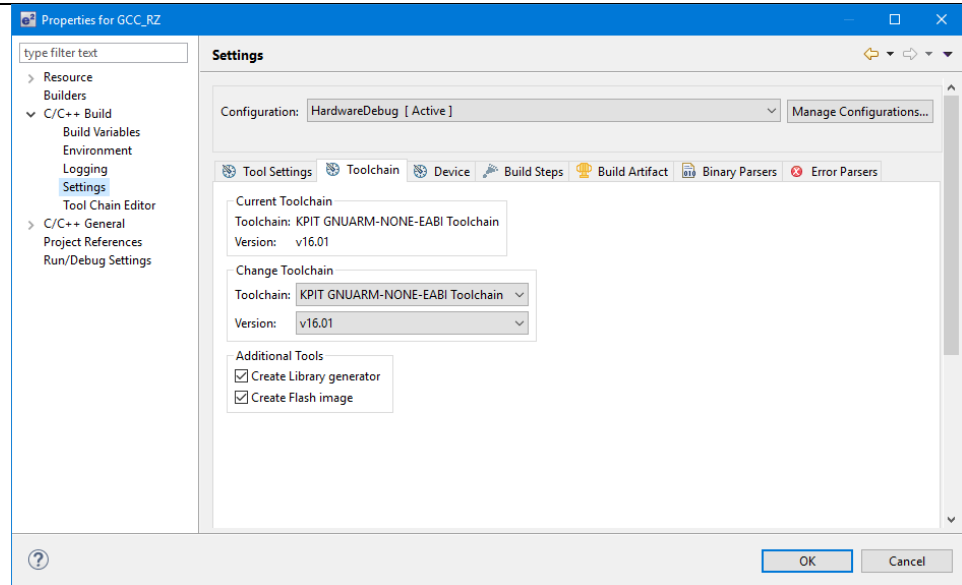

RZ Toolchain The now legacy KPIT GNU ARM-NONE toolchain is still supported within the e2 studio product but now using the gnuarmeclipse plugins.

In addition RZ within e2 studio now supports the GNU ARM Launchpad toolchain. Available from <https://launchpad.net/gcc-arm-embedded>.

One drawback of this toolchain is that it does not have a standard library builder provided in the same manner as the legacy KPIT ARM-NONE toolchain. To use this feature for ARM Launchpad and gain access to the more efficient optlib libraries a further download is required.

This can be downloaded within the e2 studio installer or directly from here: <https://gcc-renesas.com/rz/rz-download-toolchains/>

Once integrated it is possible to integrate the library generator from the toolchain tab of the build settings page.

See “Create Library generator” option. Once checked the library generator (libgen) is added to the available tool settings.

QE compatibility	If QE for TCP/IP V1.0.0 is used, please update it to V1.0.1. Other QE series can be used with e2 studio 6.0.
	<p>What is QE? https://www.renesas.com/products/software-tools/tools/solution-toolkit/qe.html</p> <p>Details of QE for TCP/IP https://www.renesas.com/products/software-tools/tools/solution-toolkit/qe-qe-for-tcp-ip.html</p>
5954 Application	<p>If you experience the error message “org.eclipse.swt.SWTError: No more handles” this can be caused by certain multi-monitor software and the Eclipse framework.</p> <p>If this error occurs there are 2 workarounds:</p> <ol style="list-style-type: none"> 1. Use a single monitor display. 2. Uninstall the multiple monitor software from your graphics chipset vendor and revert to the standard Windows multi-monitor feature.
6981 RL78 Debugging	<p>When debugging IAR C source file with an OCD emulator (E1), the Monitor program area (0x00002-0x00003) is used.</p> <p>So this area must be excluded from usable address space. Please add '-HFF' in the linker option.</p> <ul style="list-style-type: none"> - Open Property. - Select [C/C++ build]-[Settings] at left side. - Select 'IAR RL78 Xlink linker' at right side, add '-HFF' at the textbox 'command'. <p>Not doing this will cause problems with connection and download when using interrupts.</p>
NA Application	If you are experiencing slow building of projects within e ² studio there are some possibilities to improve.

The system environment will attempt to find the make.exe tool via the system environment. If you ensure the directory make resides in is at the start of the path variable it will find it more quickly. Especially important if there are network drives in the path.

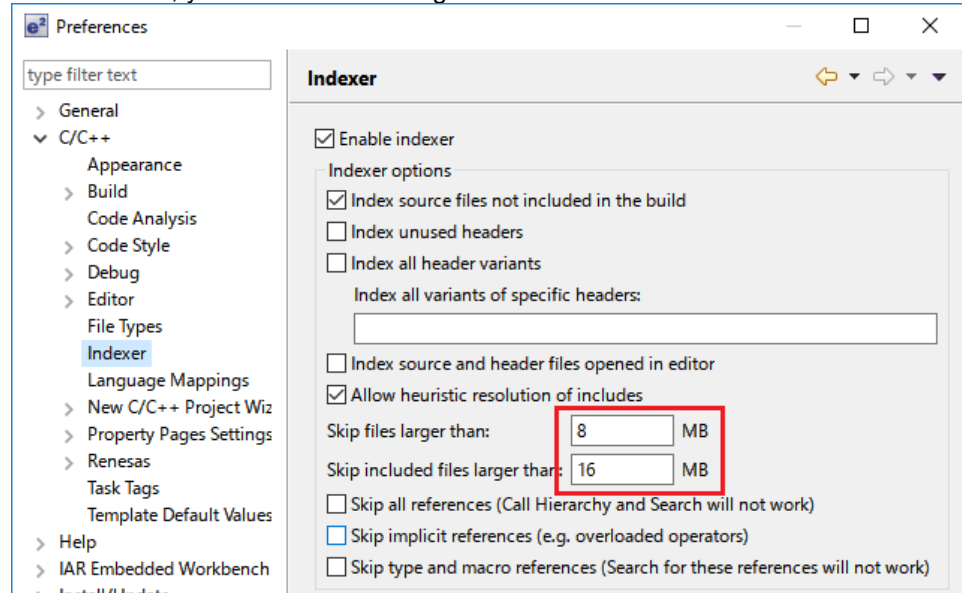

In the project properties, C/C++ Build tab, behavior tab you can switch on parallel build. This will take advantage of the multi-cores on your host machine if it has them.

NA	RZ GCC	<p>In 3.0 the KPIT GCC RZ toolchain was supported at version 14.01. This version is no longer supported within e² studio.</p> <p>KPIT modified the name of their ARM toolchain to be ARM-none-eabi to follow standard ARM naming convention like other GCC toolchain vendors.</p> <p>The ARM-none toolchain is available at versions 14.01, 14.02 and 16.01 from the www.gcc-renesas.com website. The binaries in the 14.01 version are identical to those used in the 14.01 RZ toolchain.</p> <p>Once the toolchain is installed your projects will be imported and ported to ensure there is as little disruption as possible due to this change.</p>
NA	KPIT GCC	<p>The KPIT toolchains are now no longer supported by the www.kpitgnutools.com website. Support is now available from the www.gcc-renesas.com website.</p> <p>In addition, there are two new releases for the GNU toolchains for RX and RL78. These are now named Renesas GCC for RX and Renesas GCC for RL78.</p> <p>Both integrate into e² studio and can be selected from the project wizard.</p>
2010	HEW Importer	<p>Symptoms: Project fails to build after importing a legacy project from HEW</p> <p>Conditions: If a long filename or path is used, and the HEW project importer is used, the project may fail to build.</p> <p>Workaround: Move the original HEW project to a shallow directory structure (i.e.) C:\Workspace and import from there. Also, ensure that the HEW project is relocated before importing into e² studio.</p>
1922	Application	<p>Symptoms: Project fails to build in first instance after archive project import (not from HEW)</p> <p>Conditions: If an archived project is imported, it may fail to build the first time, due to a residual .d file.</p> <p>Workaround: Clean and Build a second time.</p>

2762 CODAN When using assembly code within a C source file, CODAN errors can be observed in the editor. Even though the project builds successfully, or even after rebuild index.

Indexer buffer can be insufficient to process whole project.
Please try giving larger values for the following configurations.

Open preferences dialog through "Window"->"Preferences" menu. In "C/C++" -> "Indexer" tree, you will indexer configuration as shown below:

Put larger values for each red-framed variables, then rebuild project or rebuild index.

2728 GDB Step into does not always work when using the CC-RX 1.02.01 toolchain.

To ensure this behaves correctly you will need to use CC-RX 2.00.00 or greater as this issue with the debug information is corrected in this release.

NA Eventpoints If eventpoints do not always work just after they are set, you can use the "Apply to Target" toolbar button in the Eventpoint view to send the Eventpoints to the target manually. This will always ensure the debugger target has all the required eventpoint updates before execution starts.

5772 IAR Plugins The IAR Plugin Manager is included in e² studio and provides support for RX, RL78, RH850 and RZ (ARM).

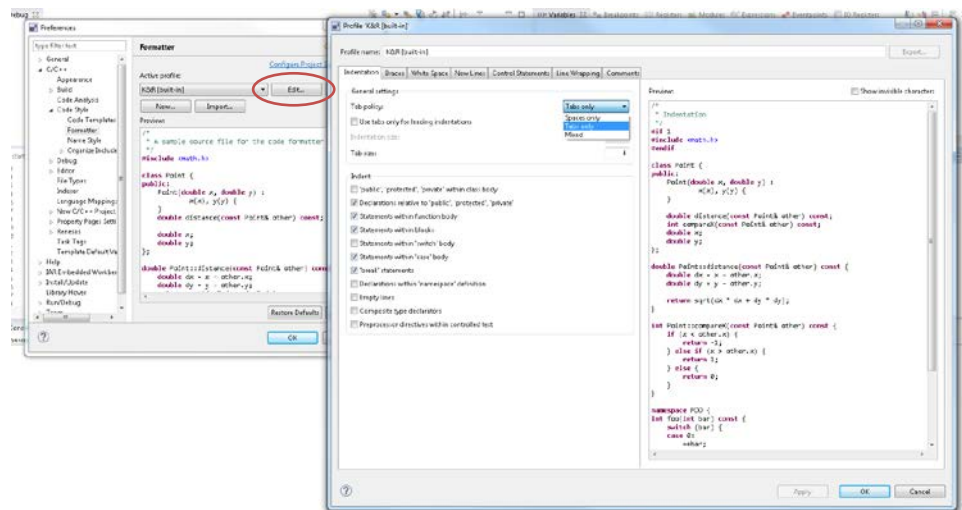

This tool, simplifies installation and configuration of IAR toolchain plugins. You can access this through Help -> IAR Embedded Workbench plugin manager.

5903 Code Generator For the following RL78 code generator project, "Peripheral Functions" view tabs may not be operated with double-clicking "Peripheral Functions" branch of Project Explorer view.

After creating/loading the project, please show "Code Preview" view by double-clicking of "Code preview" branch at Project Explorer tree at first. Then, please access Code Generator setting tabs by double-clicking Project Explorer tree or using pull-down menu by pressing triangle button at the up-right corner of Peripheral Functions view.

RL78/G12, RL78/G13, RL78/G14, RL78/G1A, RL78/I1A, RL78/F13, RL78/F14, RL78/F12, RL78/L12

6184	RL78/CC-RL debugging	When the load module for RL78/G10 which created at CC-RL is debugged in E1, please specify the following option: [Linker] -> [Device] -> "Set enable/disable on-chip debug by link option"
7217	Application	The restore default settings does not restore all of the options set during project generation. Instead, it sets the defaults to the base settings for the device family in use.
7524	RZ/T1 Debugging	In a RZ/T1 RAM-based project, the "Reload" function does not work. Reloading or re-downloading during debugging resets the device and the RAM content is erased. To continue the debugging, disconnect and connect the debugger again.
	Use spaces as tabs	Eclipse and CDT both have settings for use spaces as tabs. The option on the Editor preferences page conflicts with the CDT formatter settings. To change the use spaces as tabs option in e ² studio please use this page:

Installer problems	In some situations, the AVG virus checker appears to interfere with the e ² studio installation process. If you experience such a problem, please temporarily disable the AVG tool and try the installation again.
Antivirus	In some situations, the Norton anti-virus tool can interfere with the building of Renesas Synergy projects. If possible, please disable the antivirus program when building Renesas Synergy projects on systems with Norton Antivirus installed.
Green Hills RH850 Projects	When debugging the RH850 object built with the Green Hills compiler in e ² studio, specify the following option for the compiler option. -gtws The GUI setting menu is as follows. [GHS C Compiler for V800 Standalone]-[Debugging Option] "Generate Target-Walkable Stack" -> On If this option is not specified, Step Over and Step Return may not work properly.
17052 Debugging	When debugging using a project with duplicate filenames that are located in different source folders problems can be seen with breakpoint setting. When a breakpoint is set at a source line in this file it will also stop at the same source line in the other same named file when execution passes through.

7. Open Issues in 6.1.0

Open issues in the e2 studio 6.1 product will be kept up to date [here](#):

Please visit to see the latest open issue list.

Notice

1. Descriptions of circuits, software and other related information in this document are provided only to illustrate the operation of semiconductor products and application examples. You are fully responsible for the incorporation or any other use of the circuits, software, and information in the design of your product or system. Renesas Electronics disclaims any and all liability for any losses and damages incurred by you or third parties arising from the use of these circuits, software, or information.
2. Renesas Electronics hereby expressly disclaims any warranties against and liability for infringement or any other disputes involving patents, copyrights, or other intellectual property rights of third parties, by or arising from the use of Renesas Electronics products or technical information described in this document, including but not limited to, the product data, drawing, chart, program, algorithm, application examples.
3. No license, express, implied or otherwise, is granted hereby under any patents, copyrights or other intellectual property rights of Renesas Electronics or others.
4. You shall not alter, modify, copy, or otherwise misappropriate any Renesas Electronics product, whether in whole or in part. Renesas Electronics disclaims any and all liability for any losses or damages incurred by you or third parties arising from such alteration, modification, copy or otherwise misappropriation of Renesas Electronics products.
5. Renesas Electronics products are classified according to the following two quality grades: "Standard" and "High Quality". The intended applications for each Renesas Electronics product depends on the product's quality grade, as indicated below.
"Standard": Computers; office equipment; communications equipment; test and measurement equipment; audio and visual equipment; home electronic appliances; machine tools; personal electronic equipment; and industrial robots etc.
"High Quality": Transportation equipment (automobiles, trains, ships, etc.); traffic control (traffic lights); large-scale communication equipment; key financial terminal systems; safety control equipment; etc.
Renesas Electronics products are neither intended nor authorized for use in products or systems that may pose a direct threat to human life or bodily injury (artificial life support devices or systems, surgical implantations etc.), or may cause serious property damages (space and undersea repeaters; nuclear power control systems; aircraft control systems; key plant systems; military equipment; etc.). Renesas Electronics disclaims any and all liability for any damages or losses incurred by you or third parties arising from the use of any Renesas Electronics product for which the product is not intended by Renesas Electronics.
6. When using the Renesas Electronics products, refer to the latest product information (data sheets, user's manuals, application notes, "General Notes for Handling and Using Semiconductor Devices" in the reliability handbook, etc.), and ensure that usage conditions are within the ranges specified by Renesas Electronics with respect to maximum ratings, operating power supply voltage range, heat radiation characteristics, installation, etc. Renesas Electronics disclaims any and all liability for any malfunctions or failure or accident arising out of the use of Renesas Electronics products beyond such specified ranges.
7. Although Renesas Electronics endeavors to improve the quality and reliability of Renesas Electronics products, semiconductor products have specific characteristics such as the occurrence of failure at a certain rate and malfunctions under certain use conditions. Further, Renesas Electronics products are not subject to radiation resistance design. Please ensure to implement safety measures to guard them against the possibility of bodily injury, injury or damage caused by fire, and social damage in the event of failure or malfunction of Renesas Electronics products, such as safety design for hardware and software including but not limited to redundancy, fire control and malfunction prevention, appropriate treatment for aging degradation or any other appropriate measures by your own responsibility as warranty for your products/system. Because the evaluation of microcomputer software alone is very difficult and not practical, please evaluate the safety of the final products or systems manufactured by you.
8. Please contact a Renesas Electronics sales office for details as to environmental matters such as the environmental compatibility of each Renesas Electronics product. Please investigate applicable laws and regulations that regulate the inclusion or use of controlled substances, including without limitation, the EU RoHS Directive carefully and sufficiently and use Renesas Electronics products in compliance with all these applicable laws and regulations. Renesas Electronics disclaims any and all liability for damages or losses occurring as a result of your noncompliance with applicable laws and regulations.
9. Renesas Electronics products and technologies shall not be used for or incorporated into any products or systems whose manufacture, use, or sale is prohibited under any applicable domestic or foreign laws or regulations. You shall not use Renesas Electronics products or technologies for (1) any purpose relating to the development, design, manufacture, use, stockpiling, etc., of weapons of mass destruction, such as nuclear weapons, chemical weapons, or biological weapons, or missiles (including unmanned aerial vehicles (UAVs)) for delivering such weapons, (2) any purpose relating to the development, design, manufacture, or use of conventional weapons, or (3) any other purpose of disturbing international peace and security, and you shall not sell, export, lease, transfer, or release Renesas Electronics products or technologies to any third party whether directly or indirectly with knowledge or reason to know that the third party or any other party will engage in the activities described above. When exporting, selling, transferring, etc., Renesas Electronics products or technologies, you shall comply with any applicable export control laws and regulations promulgated and administered by the governments of the countries asserting jurisdiction over the parties or transactions.
10. Please acknowledge and agree that you shall bear all the losses and damages which are incurred from the misuse or violation of the terms and conditions described in this document, including this notice, and hold Renesas Electronics harmless, if such misuse or violation results from your resale or making Renesas Electronics products available any third party.
11. This document shall not be reprinted, reproduced or duplicated in any form, in whole or in part, without prior written consent of Renesas Electronics.
12. Please contact a Renesas Electronics sales office if you have any questions regarding the information contained in this document or Renesas Electronics products.

(Note 1) "Renesas Electronics" as used in this document means Renesas Electronics Corporation and also includes its majority-owned subsidiaries.

(Note 2) "Renesas Electronics product(s)" means any product developed or manufactured by or for Renesas Electronics.
