# Picade Wiring Loom

PIM109

Originally designed to connect the Picade controller board to the joystick and arcade buttons, the Picade wiring loom is now available for all of your prototyping needs.

Featuring 32 crimped connectors you can use this colourful and sturdy cable to build your Picade components into any case or installation that takes your fancy.

Alternatively, if you just need some colour coded cables with crimped connectors for your own project then this is the bundle for you!

Please note: the cable colours in this loom do not correspond to the instructions shipped with the Picade. Please be careful with your connections when constructing your beautiful arcade machine!
