

M14x1.25 (x6)

R.1300 (x3 - designed for 1/4-20 bolts)
[3,302]

R.1000 (x4 - designed for drywall screws)
[2,54]

SCALE 1.250

Are you frustrated with the lack of dexterity from most third hands? The SparkFun Third Hand gives you the ability to hold a board between two alligator clips on two flexible arms with multiple points of articulation. The arm's wide range of articulation gives you access to any angle of the board that you are currently working on, making soldering that much easier. The SparkFun Third Hand also won't move around while you work thanks to a heavy aluminum base supporting the arms.

Even though we give you two alligator clips for the flex arms, that shouldn't restrict their functionality to just holding a PCB. Add an LED for better lighting, a fan to keep solder fumes out of your face, or a magnifying glass to get an up close and personal look at what you are working on.

- Kit Includes:
 1x Aluminum Base Plate
 2x Flex Arms
 2x Alligator Clips
 2x Alligator Clip Covers
 2x 1" 6-32 Phillips Screws
 4x Silicon Bumpers

NOTES:	MATERIAL:	6061 Aluminum	MODEL NAME:	SparkFun Third Hand Kit
