

MB95F394H/F396K/F398H/F394K/F396H/F398K

CMOS F²MC-8FX MB95390H Series 8-bit Microcontrollers

MB95390H is a series of general-purpose, single-chip microcontrollers. In addition to a compact instruction set, the microcontrollers of this series contain a variety of peripheral resources.

Features

F²MC-8FX CPU core

Instruction set optimized for controllers

- Multiplication and division instructions
- 16-bit arithmetic operations
- Bit test branch instructions
- Bit manipulation instructions, etc.

Clock

- Selectable main clock source

Main OSC clock (up to 16.25 MHz, maximum machine clock frequency: 8.125 MHz)

External clock (up to 32.5 MHz, maximum machine clock frequency: 16.25 MHz)

Main CR clock (1/8/10/12.5 MHz $\pm 2\%$ or $\pm 2.5\%^*$, maximum machine clock frequency: 12.5 MHz)

*The main CR clock oscillation accuracy of a product in LQFP package (FPT-48P-M49 or FPT-52P-M02) is $\pm 2\%$ and that of a product in QFN package (LCC-48P-M11) is $\pm 2.5\%$.

- Selectable subclock source

Sub-OSC clock (32.768 kHz)

External clock (32.768 kHz)

Sub-CR clock (Typ: 100 kHz, Min: 50 kHz, Max: 200 kHz)

Timer

- 8/16-bit composite timer $\times 2$ channels
- 8/16-bit PPG $\times 3$ channels
- 16-bit PPG $\times 1$ channel (can work independently or together with the multi-pulse generator)
- 16-bit reload timer $\times 1$ channel (can work independently or together with the multi-pulse generator)
- Time-base timer $\times 1$ channel
- Watch prescaler $\times 1$ channel

UART/SIO $\times 1$ channel

- Full duplex double buffer
- Capable of clock-asynchronous (UART) serial data transfer and clock-synchronous (SIO) serial data transfer

I²C $\times 1$ channel

- Built-in wake-up function

Multi-pulse generator (MPG) (for DC motor control) $\times 1$ channel

- 16-bit reload timer $\times 1$ channel
- 16-bit PPG timer $\times 1$ channel
- Waveform sequencer (including a 16-bit timer equipped with a buffer and a compare clear function)

LIN-UART

- Full duplex double buffer
- Capable of clock-synchronous serial data transfer and clock-asynchronous serial data transfer

External interrupt $\times 8$ channels

- Interrupt by edge detection (rising edge, falling edge, and both edges can be selected)
- Can be used to wake up the device from different low power consumption (standby) modes

8/10-bit A/D converter $\times 12$ channels

- 8-bit and 10-bit resolution can be chosen.

Low power consumption (standby) modes

- Stop mode
- Sleep mode
- Watch mode
- Time-base timer mode

I/O port

- MB95F394H/F396H/F398H (maximum no. of I/O ports: 44)
General-purpose I/O ports (N-ch open drain)..... : 3
General-purpose I/O ports (CMOS I/O)..... : 41
- MB95F394K/F396K/F398K (maximum no. of I/O ports: 45)
General-purpose I/O ports (N-ch open drain)..... : 4
General-purpose I/O ports (CMOS I/O)..... : 41

On-chip debug

- 1-wire serial control
- Serial writing supported (asynchronous mode)

Hardware/software watchdog timer

- Built-in hardware watchdog timer
- Built-in software watchdog timer

Low-voltage detection reset circuit

- Built-in low-voltage detector

Clock supervisor counter

- Built-in clock supervisor counter function

Programmable port input voltage level

- CMOS input level / hysteresis input level

Dual operation Flash memory

- The erase/write operation and the read operation can be executed in different banks (upper bank/lower bank) simultaneously.

Flash memory security function

- Protects the content of the Flash memory

1. Product Line-up

Part number	MB95F394H	MB95F396H	MB95F398H	MB95F394K	MB95F396K	MB95F398K
Parameter						
Type	Flash memory product					
Clock supervisor counter	It supervises the main clock oscillation.					
Program ROM capacity	20 Kbyte	36 Kbyte	60 Kbyte	20 Kbyte	36 Kbyte	60 Kbyte
RAM capacity	496 bytes	1008 bytes	2032 bytes	496 bytes	1008 bytes	2032 bytes
Low-voltage detection reset	No			Yes		
Reset input	Dedicated			Selected through software		
CPU functions	<ul style="list-style-type: none"> • Number of basic instructions : 136 • Instruction bit length : 8 bits • Instruction length : 1 to 3 bytes • Data bit length : 1, 8 and 16 bits • Minimum instruction execution time : 61.5 ns (with machine clock frequency = 16.25 MHz) • Interrupt processing time : 0.6 μs (with machine clock frequency = 16.25 MHz) 					
General-purpose I/O	<ul style="list-style-type: none"> • I/O ports (Max) : 44 • CMOS I/O : 41 • N-ch open drain : 3 			<ul style="list-style-type: none"> • I/O ports (Max) : 45 • CMOS I/O : 41 • N-ch open drain : 4 		
Time-base timer	Interval time: 0.256 ms to 8.3 s (with external clock frequency = 4 MHz)					
Hardware/software watchdog timer	<ul style="list-style-type: none"> • Reset generation cycle <ul style="list-style-type: none"> - Main oscillation clock at 10 MHz: 105 ms (Min) • The sub-CR clock can be used as the source clock of the hardware watchdog timer. 					
Wild register	It can be used to replace three bytes of data.					
LIN-UART	<ul style="list-style-type: none"> • A wide range of communication speeds can be selected by a dedicated reload timer. • Clock-synchronous serial data transfer and clock-asynchronous serial data transfer is enabled. • The LIN function can be used as a LIN master or a LIN slave. 					
8/10-bit A/D converter	12 channels					
	8-bit resolution and 10-bit resolution can be chosen.					
8/16-bit composite timer	2 channels					
	<ul style="list-style-type: none"> • The timer can be configured as an "8-bit timer × 2 channels" or a "16-bit timer × 1 channel". • It has the following functions: timer function, PWC function, PWM function and input capture function. • Count clock: it can be selected from internal clocks (seven types) and external clocks. • It can output square wave. 					
External interrupt	8 channels					
	<ul style="list-style-type: none"> • Interrupt by edge detection (The rising edge, falling edge, or both edges can be selected.) • It can be used to wake up the device from different standby modes. 					
On-chip debug	<ul style="list-style-type: none"> • 1-wire serial control • It supports serial writing. (asynchronous mode)

(Continued)

Part number	MB95F394H	MB95F396H	MB95F398H	MB95F394K	MB95F396K	MB95F398K
Parameter						
UART/SIO	1 channel <ul style="list-style-type: none"> Data transfer with UART/SIO is enabled. It has a full duplex double buffer, variable data length (5/6/7/8 bits), a built-in baud rate generator and an error detection function. It uses the NRZ type transfer format. LSB-first data transfer and MSB-first data transfer are available to use. Clock-asynchronous (UART) serial data transfer and clock-synchronous (SIO) serial data transfer is enabled. 					
I ² C	1 channel <ul style="list-style-type: none"> Master/slave transmission and receiving It has the following functions: bus error function, arbitration function, transmission direction detection function, wake-up function, and functions of generating and detecting repeated START conditions. 					
8/16-bit PPG	3 channels <ul style="list-style-type: none"> Each channel of PPG can be used as two 8-bit PPG channels or a single 16-bit PPG channel. The counter operating clock can be selected from eight clock sources. 					
16-bit PPG	<ul style="list-style-type: none"> PWM mode and one-shot mode are available to use. The counter operating clock can be selected from eight clock sources. It supports external trigger start. It can work independently or together with the multi-pulse generator. 					
16-bit reload timer	<ul style="list-style-type: none"> Two clock modes and two counter operating modes are available to use. It can output square waveform. Count clock: it can be selected from internal clocks (seven types) and external clocks. Two counter operating modes: reload mode and one-shot mode It can work independently or together with the multi-pulse generator. 					
Multi-pulse generator (for DC motor control)	<ul style="list-style-type: none"> 16-bit PPG timer: 1 channel 16-bit reload timer operations: toggle output, one-shot output Event counter: 1 channel Waveform sequencer (including a 16-bit timer equipped with a buffer and a compare clear function) 					
Watch prescaler	Eight different time intervals can be selected.					
Flash memory	<ul style="list-style-type: none"> It supports automatic programming, Embedded Algorithm, and write/erase/erase-suspend/erase-resume commands. It has a flag indicating the completion of the operation of Embedded Algorithm. Number of write/erase cycles: 100000 Data retention time: 20 years Flash security feature for protecting the content of the Flash memory 					
Standby mode	Sleep mode, stop mode, watch mode, time-base timer mode					
Package	FPT-48P-M49 FPT-52P-M02 LCC-48P-M11

3. Differences Among Products and Notes on Product Selection

■ Current consumption

When using the on-chip debug function, take account of the current consumption of flash erase/write.

For details of current consumption, see “Electrical Characteristics”.

■ Package

For details of information on each package, see “Packages and Corresponding Products” and “Package Dimension”.

■ Operating voltage

The operating voltage varies, depending on whether the on-chip debug function is used or not.

For details of the operating voltage, see “Electrical Characteristics”.

■ On-chip debug function

The on-chip debug function requires that V_{CC} , V_{SS} and one serial wire be connected to an evaluation tool. For details of the connection method, refer to “CHAPTER 29 EXAMPLE OF SERIAL PROGRAMMING CONNECTION” in the hardware manual of the MB95390H Series.

4. Pin Assignment

7. Notes On Device Handling

■ Preventing latch-ups

When using the device, ensure that the voltage applied does not exceed the maximum voltage rating.

In a CMOS IC, if a voltage higher than V_{CC} or a voltage lower than V_{SS} is applied to an input/output pin that is neither a medium-withstand voltage pin nor a high-withstand voltage pin, or if a voltage out of the rating range of power supply voltage mentioned in "14.1 Absolute Maximum Ratings" of "Electrical Characteristics" is applied to the V_{CC} pin or the V_{SS} pin, a latch-up may occur.

When a latch-up occurs, power supply current increases significantly, which may cause a component to be thermally destroyed.

■ Stabilizing supply voltage

Supply voltage must be stabilized.

A malfunction may occur when power supply voltage fluctuates rapidly even though the fluctuation is within the guaranteed operating range of the V_{CC} power supply voltage.

As a rule of voltage stabilization, suppress voltage fluctuation so that the fluctuation in V_{CC} ripple (p-p value) at the commercial frequency (50 Hz/60 Hz) does not exceed 10% of the standard V_{CC} value, and the transient fluctuation rate does not exceed 0.1 V/ms at a momentary fluctuation such as switching the power supply.

■ Notes on using the external clock

When an external clock is used, oscillation stabilization wait time is required for power-on reset, wake-up from subclock mode or stop mode.

8. Pin Connection

■ Treatment of unused pins

If an unused input pin is left unconnected, a component may be permanently damaged due to malfunctions or latch-ups. Always pull up or pull down an unused input pin through a resistor of at least 2 k Ω . Set an unused input/output pin to the output state and leave it unconnected, or set it to the input state and treat it the same as an unused input pin. If there is an unused output pin, leave it unconnected.

9. Power supply pins

To reduce unnecessary electro-magnetic emission, prevent malfunctions of strobe signals due to an increase in the ground level, and conform to the total output current standard, always connect the V_{CC} pin and the V_{SS} pin to the power supply and ground outside the device. In addition, connect the current supply source to the V_{CC} pin and the V_{SS} pin with low impedance.

It is also advisable to connect a ceramic capacitor of approximately 0.1 μ F as a bypass capacitor between the V_{CC} pin and the V_{SS} pin at a location close to this device.

■ DBG pin

Connect the DBG pin directly to an external pull-up resistor.

To prevent the device from unintentionally entering the debug mode due to noise, minimize the distance between the DBG pin and the V_{CC} or V_{SS} pin when designing the layout of the printed circuit board.

The DBG pin should not stay at "L" level after power-on until the reset output is released.

■ \overline{RST} pin

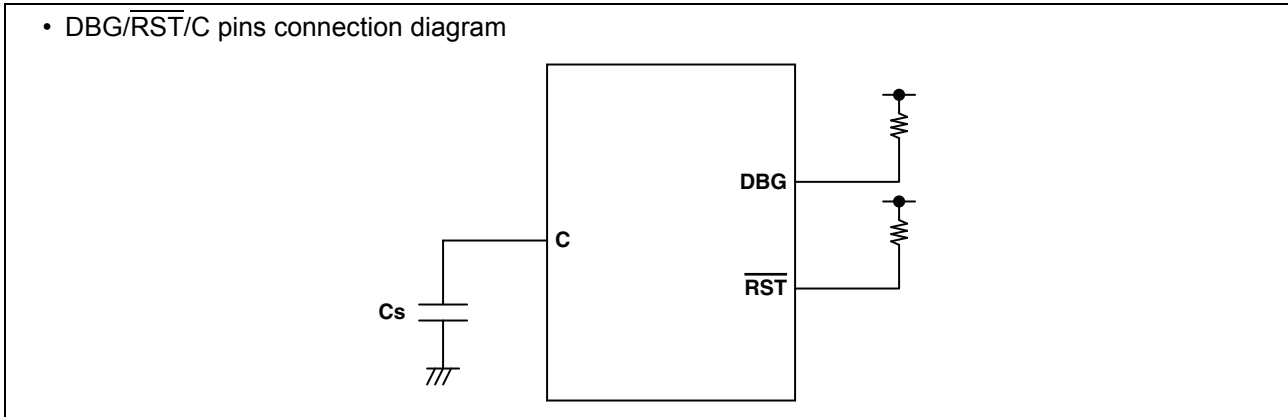

Connect the \overline{RST} pin directly to an external pull-up resistor.

To prevent the device from unintentionally entering the reset mode due to noise, minimize the distance between the \overline{RST} pin and the V_{CC} or V_{SS} pin when designing the layout of the printed circuit board.

The \overline{RST} /PF2 pin functions as the reset input/output pin after power-on. In addition, the reset output of the \overline{RST} /PF2 pin can be enabled by the RSTOE bit in the SYSC register, and the reset input function and the general purpose I/O function can be selected by the RSTEN bit in the SYSC register.

■ C pin

Use a ceramic capacitor or a capacitor with equivalent frequency characteristics. The bypass capacitor for the V_{CC} pin must have a capacitance larger than C_S . For the connection to a smoothing capacitor C_S , see the diagram below. To prevent the device from unintentionally entering a mode to which the device is not set to transit due to noise, minimize the distance between the C pin and C_S and the distance between C_S and the V_{SS} pin when designing the layout of a printed circuit board.

10. Block Diagram

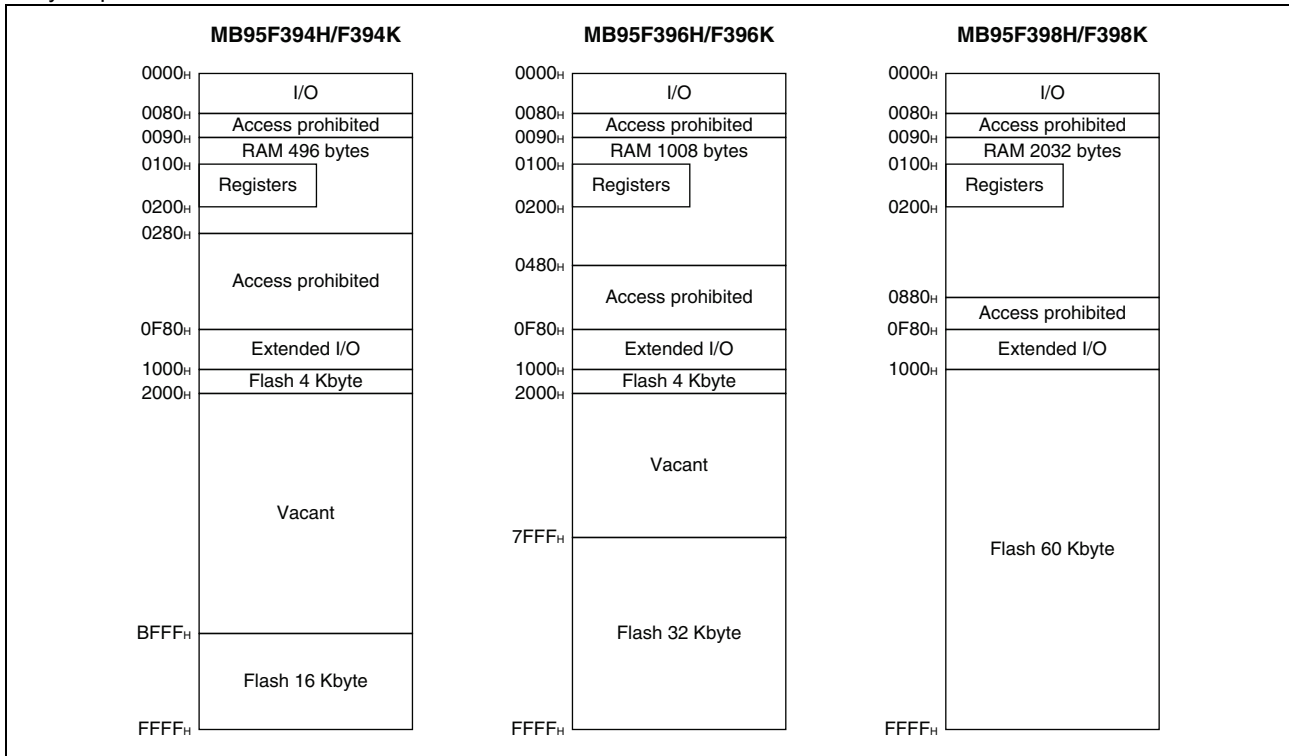

11. CPU Core

■ Memory Space

The memory space of the MB95390H Series is 64 Kbyte in size, and consists of an I/O area, a data area, and a program area. The memory space includes areas intended for specific purposes such as general-purpose registers and a vector table. The memory maps of the MB95390H Series are shown below.

■ Memory Maps

12. I/O Map

Address	Register abbreviation	Register name	R/W	Initial value
0000 _H	PDR0	Port 0 data register	R/W	00000000 _B

■ R/W access symbols

R/W : Readable / Writable

R : Read only

W : Write only

■ Initial value symbols

0 : The initial value of this bit is "0".

1 : The initial value of this bit is "1".

X : The initial value of this bit is indeterminate.

Note: Do not write to an address that is "(Disabled)". If a "(Disabled)" address is read, an indeterminate value is returned.

13. Interrupt Source Table

Interrupt source	Interrupt request number	Vector table address		Bit name of interrupt level setting register	Priority order of interrupt sources of the same level (occurring simultaneously)
		Upper	Lower		
External interrupt ch. 0, ch. 4	IRQ00	FFFA _H	FFFB _H	L00 [1:0]	<div style="text-align: center;">High</div>  <div style="text-align: center;">Low</div>
External interrupt ch. 1, ch. 5	IRQ01	FFF8 _H	FFF9 _H	L01 [1:0]	
External interrupt ch. 2, ch. 6	IRQ02	FFF6 _H	FFF7 _H	L02 [1:0]	
External interrupt ch. 3, ch. 7	IRQ03	FFF4 _H	FFF5 _H	L03 [1:0]	
UART/SIO ch. 0, MPG (DTTI)	IRQ04	FFF2 _H	FFF3 _H	L04 [1:0]

8/16-bit composite timer ch. 1 (upper)	IRQ14	FFDE _H	FFDF _H	L14 [1:0]	
8/16-bit PPG ch. 2 (lower)	IRQ15	FFDC _H	FFDD _H	L15 [1:0]	
16-bit reload timer ch. 1, MPG (write timing/compare clear), I ² C	IRQ16	FFDA _H	FFDB _H	L16 [1:0]	
16-bit PPG timer ch. 1, MPG (position detection/compare match)	IRQ17	FFD8 _H	FFD9 _H	L17 [1:0]	
8/10-bit A/D converter	IRQ18	FFD6 _H	FFD7 _H	L18 [1:0]	
Time-base timer	IRQ19	FFD4 _H	FFD5 _H	L19 [1:0]	
Watch prescaler	IRQ20	FFD2 _H	FFD3 _H	L20 [1:0]	
—	IRQ21	FFD0 _H	FFD1 _H	L21 [1:0]	
8/16-bit composite timer ch. 1 (lower)	IRQ22	FFCE _H	FFCF _H	L22 [1:0]	
Flash memory	IRQ23	FFCC _H	FFCD _H	L23 [1:0]	

14. Electrical Characteristics

14.1 Absolute Maximum Ratings

Parameter	Symbol	Rating		Unit	Remarks
		Min	Max		
Power supply voltage* ¹	V_{CC}	$V_{SS} - 0.3$	$V_{SS} + 6$	V	
Input voltage* ¹	V_I	$V_{SS} - 0.3$	$V_{SS} + 6$	V	*2
Output voltage* ¹	V_O	$V_{SS} - 0.3$	$V_{SS} + 6$	V	*2
Maximum clamp current	I_{CLAMP}	-2	+2	mA	Applicable to specific pins* ³
Total maximum clamp current	$\sum I_{CLAMP} $	—	20	mA	Applicable to specific pins* ³
"L" level maximum output current	I_{OL1}	—	15	mA	Other than P62 to P67
	I_{OL2}	—	15		P62 to P67
"L" level average current	I_{OLAV1}	—	4	mA	Other than P62 to P67 Average output current = operating current × operating ratio (1 pin)
	I_{OLAV2}	—	12		P62 to P67 Average output current = operating current × operating ratio (1 pin)
"L" level total maximum output current	$\sum I_{OL}$	—	100	mA	
"L" level total average output current	$\sum I_{OLAV}$	—	50	mA	Total average output current = operating current × operating ratio (Total number of pins)
"H" level maximum output current	I_{OH1}	—	-15	mA	Other than P12, P62 to P67, P72, P73 and PF2
	I_{OH2}	—	-15		P12, P62 to P67, P72, P73 and PF2
"H" level average current	I_{OHAV1}	—	-4	mA	Other than P12, P62 to P67, P72, P73 and PF2 Average output current = operating current × operating ratio (1 pin)
	I_{OHAV2}	—	-8		P12, P62 to P67, P72, P73 and PF2 Average output current = operating current × operating ratio (1 pin)

"H" level total average output current	$\sum I_{OHAV}$	—	-50	mA	Total average output current = operating current × operating ratio (Total number of pins)
Power consumption	P_d	—	320	mW	
Operating temperature	T_A	-40	+85	°C	
Storage temperature	T_{stg}	-55	+150	°C	

(Continued)

(Continued)

*1: The parameter is based on $V_{SS} = 0.0\text{ V}$.

*2: V_I and V_O must not exceed $V_{CC} + 0.3\text{ V}$. V_I must not exceed the rated voltage. However, if the maximum current to/from an input is limited by means of an external component, the I_{CLAMP} rating is used instead of the V_I rating.

*3: Applicable to the following pins: P00 to P07, P10, P11, P13 to P17, P40 to P47, P60 to P67, P70, P71, P74 to P77, PF0, PF1, PG1 and PG2

- Use under recommended operating conditions.
- Use with DC voltage (current).
- The HV (High Voltage) signal is an input signal exceeding the V_{CC} voltage. Always connect a limiting resistor between the HV (High Voltage) signal and the microcontroller before applying the HV (High Voltage) signal.
- The value of the limiting resistor should be set to a value at which the current to be input to the microcontroller pin when the HV (High Voltage) signal is input is below the standard value, irrespective of whether the current is transient current or stationary current.
- When the microcontroller drive current is low, such as in low power consumption modes, the HV (High Voltage) input potential may pass through the protective diode to increase the potential of the V_{CC} pin, affecting other devices.
- If the HV (High Voltage) signal is input when the microcontroller power supply is off (not fixed at 0 V), since power is supplied from the pins, incomplete operations may be executed.
- If the HV (High Voltage) input is input after power-on, since power is supplied from the pins, the voltage of power supply may not be sufficient to enable a power-on reset.
- Do not leave the HV (High Voltage) input pin unconnected.
- Example of a recommended circuit

WARNING: Semiconductor devices can be permanently damaged by application of stress (voltage, current, temperature, etc.) in excess of absolute maximum ratings. Do not exceed these ratings.

14.2 Recommended Operating Conditions

 (V_{SS} = 0.0 V)

Parameter	Symbol	Value		Unit	Remarks	
		Min	Max			
Power supply voltage	V _{CC}	2.4*1*2	5.5*1	V	In normal operation	Other than on-chip debug mode
		2.3	5.5		Hold condition in stop mode	
		2.9	5.5		In normal operation	On-chip debug mode
		2.3	5.5		Hold condition in stop mode	
Smoothing capacitor	C _S	0.022	1	μF	*3	
Operating temperature	T _A	-40	+85	°C	Other than on-chip debug mode	
		+5	+35		On-chip debug mode	

*1: The value varies depending on the operating frequency, the machine clock and the analog guaranteed range.

*2: This value becomes 2.88 V when the low-voltage detection reset is used.

*3: Use a ceramic capacitor or a capacitor with equivalent frequency characteristics. The bypass capacitor for the V_{CC} pin must have a capacitance larger than C_S. For the connection to a smoothing capacitor C_S, see the diagram below. To prevent the device from unintentionally entering an unknown mode due to noise, minimize the distance between the C pin and C_S and the distance between C_S and the V_{SS} pin when designing the layout of a printed circuit board.

WARNING: The recommended operating conditions are required in order to ensure the normal operation of the semiconductor device. All of the device's electrical characteristics are warranted when the device is operated within these ranges.

Always use semiconductor devices within their recommended operating condition ranges. Operation outside these ranges may adversely affect reliability and could result in device failure. No warranty is made with respect to uses, operating conditions, or combinations not represented on the data sheet. Users considering application outside the listed conditions are advised to contact their representatives beforehand.

14.3 DC Characteristics
 $(V_{CC} = 5.0 V \pm 10\%, V_{SS} = 0.0 V, T_A = -40^\circ C \text{ to } +85^\circ C)$

Parameter	Symbol	Pin name	Condition	Value			Unit	Remarks
				Min	Typ ^{*3}	Max		
"H" level input voltage	V_{IHI}	P47, P72, P73, P77	*1	$0.7 V_{CC}$	—	$V_{CC} + 0.3$	V	When CMOS input level (hysteresis input) is selected
	V_{IHS}	P00 to P07, P10 to P17, P40 to P47, P60 to P67, P70 to P77, PF0, PF1, PG1, PG2	*1	$0.8 V_{CC}$	—	$V_{CC} + 0.3$	V	Hysteresis input
	V_{IHM}	PF2	—	$0.7 V_{CC}$	—	$V_{CC} + 0.3$	V	Hysteresis input
"L" level input voltage	V_{IL}	P47, P72, P73, P77	*1	$V_{SS} - 0.3$	—	$0.3 V_{CC}$	V	When CMOS input level (hysteresis input) is selected
	V_{ILS}	P00 to P07, P10 to P17, P40 to P47, P60 to P67, P70 to P77, PF0, PF1, PG1, PG2	*1	$V_{SS} - 0.3$	—	$0.2 V_{CC}$	V	Hysteresis input
	V_{ILM}	PF2	—	$V_{SS} - 0.3$	—	$0.3 V_{CC}$	V	Hysteresis input
Open-drain output application voltage	V_D	P12, P72, P73, PF2	—	$V_{SS} - 0.3$	—	$V_{SS} + 5.5$	V	
"H" level output voltage	V_{OH1}	Output pins other than P12, P62 to P67, P72, P73, PF2	$I_{OH} = -4 \text{ mA}$	$V_{CC} - 0.5$	—	—	V	
	V_{OH2}	P62 to P67	$I_{OH} = -8 \text{ mA}$	$V_{CC} - 0.5$	—	—	V	
"L" level output voltage	V_{OL1}	Output pins other than P62 to P67	$I_{OL} = 4 \text{ mA}$	—	—	0.4	V	
	V_{OL2}	P62 to P67	$I_{OL} = 12 \text{ mA}$	—	—	0.4	V	
Input leak current (Hi-Z output leak current)	I_{LI}	All input pins	$0.0 V < V_I < V_{CC}$	-5	—	+5	μA	When pull-up resistance is disabled
Pull-up resistance	R_{PULL}	P00 to P07, P10, P11, P13 to P17, P40 to P47, P60, P61, P70, P71, P74 to P76, PG1, PG2	$V_I = 0 V$	25	50	100	$k\Omega$	When pull-up resistance is enabled

*1: The input levels of P47, P72, P73 and P77 can be switched between “CMOS input level” and “hysteresis input level”. The input level selection register (ILSR) is used to switch between the two input levels.

*2: • The power supply current is determined by the external clock. When the low-voltage detection option is selected, the power-supply current will be the sum of adding the current consumption of the low-voltage detection circuit (I_{LVD}) to one of the value from I_{CC} to I_{CCH} . In addition, when both the low-voltage detection option and the CR oscillator are selected, the power supply current will be the sum of adding up the current consumption of the low-voltage detection circuit, the current consumption of the CR oscillators (I_{CRH} , I_{CRL}) and a specified value. In on-chip debug mode, the CR oscillator (I_{CRH}) and the low-voltage detection circuit are always enabled, and current consumption therefore increases accordingly.

*1: This is the clock before it is divided according to the division ratio set by the machine clock divide ratio select bits (SYCC:DIV1, DIV0). This source clock is divided to become a machine clock according to the divide ratio set by the machine clock divide ratio select bits (SYCC:DIV1, DIV0). In addition, a source clock can be selected from the following.

- Main clock divided by 2
- Main CR clock
- Subclock divided by 2
- Sub-CR clock divided by 2

*2: This is the operating clock of the microcontroller. A machine clock can be selected from the following.

- Source clock (no division)
- Source clock divided by 4
- Source clock divided by 8
- Source clock divided by 16

14.4.3 External Reset

($V_{CC} = 5.0 V \pm 10\%$, $V_{SS} = 0.0 V$, $T_A = -40^\circ C$ to $+85^\circ C$)

Parameter	Symbol	Value		Unit	Remarks
		Min	Max		
\overline{RST} "L" level pulse width	t_{RSTL}	$2 t_{MCLK}^{*1}$	—	ns	In normal operation
		Oscillation time of the oscillator ^{*2} + 100	—	μs	In stop mode, subclock mode, subsleep mode, watch mode, and power-on
		100	—	μs	In time-base timer mode

*1: See "Source Clock/Machine Clock" for t_{MCLK} .

*2: The oscillation time of an oscillator is the time for it to reach 90% of its amplitude. The crystal oscillator has an oscillation time of between several ms and tens of ms. The ceramic oscillator has an oscillation time of between hundreds of μs and several ms. The external clock has an oscillation time of 0 ms. The CR oscillator clock has an oscillation time of between several μs and several ms.

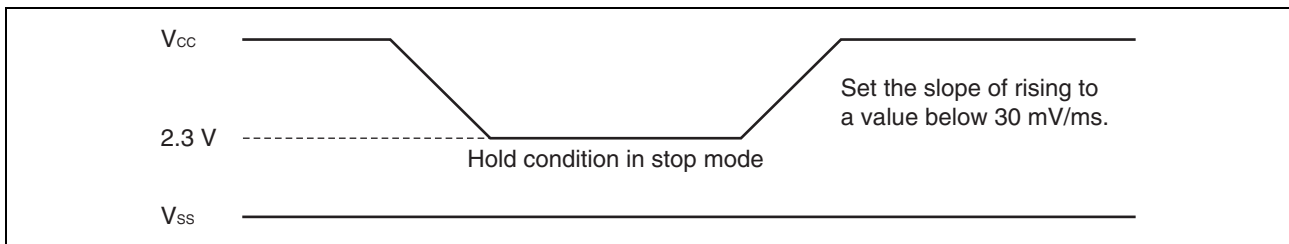

14.4.4 Power-on Reset

($V_{SS} = 0.0\text{ V}$, $T_A = -40^\circ\text{C}$ to $+85^\circ\text{C}$)

Parameter	Symbol	Condition	Value		Unit	Remarks
			Min	Max		
Power supply rising time	t_R	—	—	50	ms	
Power supply cutoff time	t_{OFF}	—	1	—	ms	Wait time until power-on

Note: A sudden change of power supply voltage may activate the power-on reset function. When changing the power supply voltage during the operation, set the slope of rising to a value below within 30 mV/ms as shown below.

14.4.5 Peripheral Input Timing

($V_{CC} = 5.0 V \pm 10\%$, $V_{SS} = 0.0 V$, $T_A = -40^\circ C$ to $+85^\circ C$)

Parameter	Symbol	Pin name	Value		Unit
			Min	Max	
Peripheral input "H" pulse width	t_{ILIH}	INT00 to INT07, EC0, EC1, TI1, TRG1	$2 t_{MCLK}^*$	—	ns
Peripheral input "L" pulse width	t_{IHIL}		$2 t_{MCLK}^*$	—	ns

*: See "Source Clock/Machine Clock" for t_{MCLK} .

14.4.6 LIN-UART Timing

Sampling is executed at the rising edge of the sampling clock*1, and serial clock delay is disabled*2.
 (ESCR register: SCES bit = 0, ECCR register: SCDE bit = 0)

($V_{CC} = 5.0\text{ V} \pm 10\%$, $AV_{SS} = V_{SS} = 0.0\text{ V}$, $T_A = -40^\circ\text{C}$ to $+85^\circ\text{C}$)

SCK \downarrow \rightarrow valid SIN hold time	t_{SLIXI}	SCK, SIN		0	—	ns
SOT \rightarrow SCK \downarrow delay time	t_{SOVLI}	SCK, SOT		—	$4 t_{MCLK}^{*3}$	ns

*1: There is a function used to choose whether the sampling of reception data is performed at a rising edge or a falling edge of the serial clock.

*2: The serial clock delay function is a function that delays the output signal of the serial clock for half clock.

*3: See "Source Clock/Machine Clock" for t_{MCLK} .

Sampling is executed at the falling edge of the sampling clock*1, and serial clock delay is enabled*2.
 (ESCR register: SCES bit = 1, ECCR register: SCDE bit = 1)

($V_{CC} = 5.0 V \pm 10\%$, $V_{SS} = 0.0 V$, $T_A = -40^\circ C$ to $+85^\circ C$)

Parameter	Symbol	Pin name	Condition	Value		Unit
				Min	Max	
Serial clock cycle time	t_{SCYC}	SCK	Internal clock operation output pin: $C_L = 80 \text{ pF} + 1 \text{ TTL}$	$5 t_{MCLK}^{*3}$	—	ns
SCK $\downarrow \rightarrow$ SOT delay time	t_{SLOVI}	SCK, SOT		-95	+95	ns
Valid SIN \rightarrow SCK \uparrow	t_{IVSHI}	SCK, SIN		$t_{MCLK}^{*3} + 190$	—	ns
SCK $\uparrow \rightarrow$ valid SIN hold time	t_{SHIXI}	SCK, SIN		0	—	ns
SOT \rightarrow SCK \uparrow delay time	t_{SOVHI}	SCK, SOT		—	$4 t_{MCLK}^{*3}$	ns

*1: There is a function used to choose whether the sampling of reception data is performed at a rising edge or a falling edge of the serial clock.

*2: The serial clock delay function is a function that delays the output signal of the serial clock for half clock.

*3: See "Source Clock/Machine Clock" for t_{MCLK} .

14.4.7 Low-voltage Detection
 $(V_{SS} = 0.0 \text{ V}, T_A = -40^\circ\text{C to } +85^\circ\text{C})$

Parameter	Symbol	Value			Unit	Remarks
		Min	Typ	Max		
Release voltage	V_{DL+}	2.52	2.7	2.88	V	At power supply rise
Detection voltage	V_{DL-}	2.42	2.6	2.78	V	At power supply fall
Hysteresis width	V_{HYS}	70	100	—	mV	
Power supply start voltage	V_{off}	—	—	2.3	V	
Power supply end voltage	V_{on}	4.9	—	—	V	
Power supply voltage change time (at power supply rise)	t_r	3000	—	—	μs	Slope of power supply that the reset release signal generates within the rating (V_{DL+})
Power supply voltage change time (at power supply fall)	t_f	300	—	—	μs	Slope of power supply that the reset detection signal generates within the rating (V_{DL-})
Reset release delay time	t_{d1}	—	—	300	μs	
Reset detection delay time	t_{d2}	—	—	20	μs	

14.4.8 I²C Timing

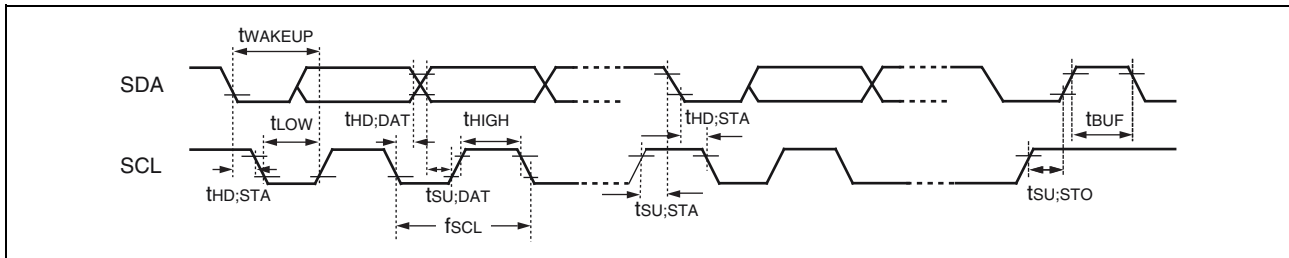

(V_{CC} = 5.0 V±10%, AV_{SS} = V_{SS} = 0.0 V, T_A = -40°C to +85°C)

Parameter	Symbol	Pin name	Condition	Value				Unit
				Standard-mode		Fast-mode		
				Min	Max	Min	Max	
SCL clock frequency	f _{SCL}	SCL	R = 1.7 kΩ, C = 50 pF ^{*1}	0	100	0	400	kHz
(Repeated) START condition hold time SDA ↓ → SCL ↓	t _{HD;STA}	SCL, SDA		4.0	—	0.6	—	μs
SCL clock "L" width	t _{LOW}	SCL		4.7	—	1.3	—	μs
SCL clock "H" width	t _{HIGH}	SCL		4.0	—	0.6	—	μs
(Repeated) START condition setup time SCL ↑ → SDA ↓	t _{SU;STA}	SCL, SDA		4.7	—	0.6	—	μs
Data hold time SCL ↓ → SDA ↓↑	t _{HD;DAT}	SCL, SDA		0	3.45 ^{*2}	0	0.9 ^{*3}	μs
Data setup time SDA ↓↑ → SCL ↑	t _{SU;DAT}	SCL, SDA		0.25	—	0.1	—	μs
STOP condition setup time SCL ↑ → SDA ↑	t _{SU;STO}	SCL, SDA		4	—	0.6	—	μs
Bus free time between STOP condition and START condition	t _{BUF}	SCL, SDA		4.7	—	1.3	—	μs

*1: R represents the pull-up resistor of the SCL and SDA lines, and C the load capacitor of the SCL and SDA lines.

*2: The maximum t_{HD;DAT} in the Standard-mode is applicable only when the time during which the device is holding the SCL signal at "L" (t_{LOW}) does not extend.

*3: A Fast-mode I²C-bus device can be used in a Standard-mode I²C-bus system, provided that the condition of t_{SU;DAT} ≥ 250 ns is fulfilled.

*1: R represents the pull-up resistor of the SCL and SDA lines, and C the load capacitor of the SCL and SDA lines.

- *2:
- See "Source Clock/Machine Clock" for t_{MCLK} .
 - m represents the CS4 bit and CS3 bit (bit4 and bit3) in the I²C clock control register (ICCR0).
 - n represents the CS2 bit to CS0 bit (bit2 to bit0) in the I²C clock control register (ICCR0).
 - The actual timing of I²C is determined by the values of m and n set by the machine clock (t_{MCLK}) and the CS4 to CS0 bits in the ICCR0 register.
 - Standard-mode:
m and n can be set to values in the following range: $0.9 \text{ MHz} < t_{MCLK} \text{ (machine clock)} < 10 \text{ MHz}$.
The usable frequencies of the machine clock are determined by the settings of m and n as shown below.

(m, n) = (1, 8)	: $0.9 \text{ MHz} < t_{MCLK} \leq 1 \text{ MHz}$
(m, n) = (1, 22), (5, 4), (6, 4), (7, 4), (8, 4)	: $0.9 \text{ MHz} < t_{MCLK} \leq 2 \text{ MHz}$
(m, n) = (1, 38), (5, 8), (6, 8), (7, 8), (8, 8)	: $0.9 \text{ MHz} < t_{MCLK} \leq 4 \text{ MHz}$
(m, n) = (1, 98)	: $0.9 \text{ MHz} < t_{MCLK} \leq 10 \text{ MHz}$
 - Fast-mode:
m and n can be set to values in the following range: $3.3 \text{ MHz} < t_{MCLK} \text{ (machine clock)} < 10 \text{ MHz}$.
The usable frequencies of the machine clock are determined by the settings of m and n as shown below.

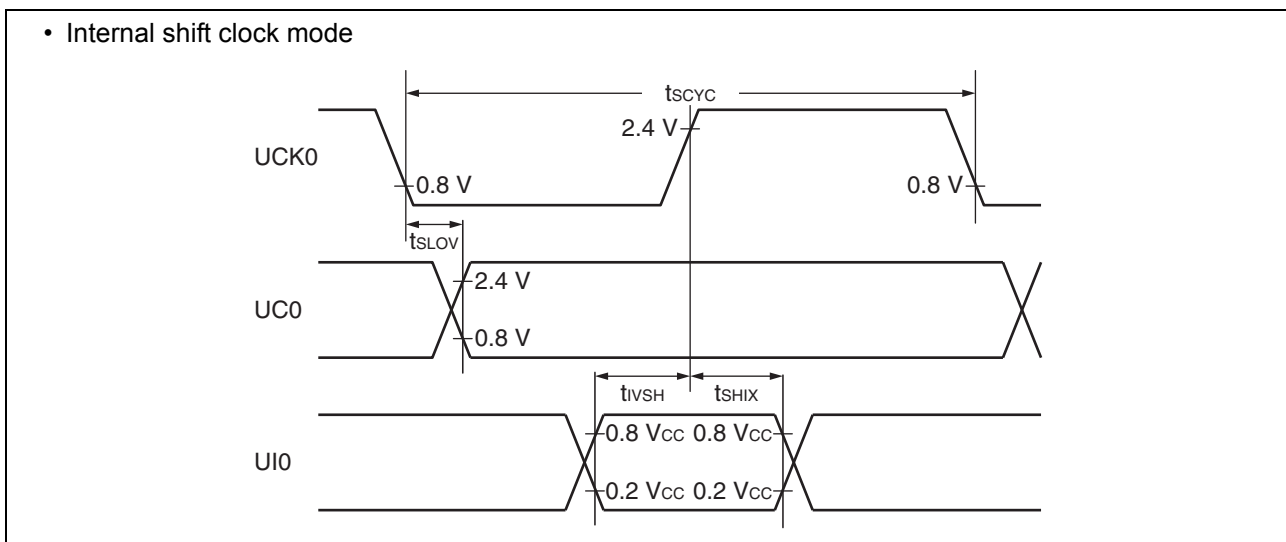

(m, n) = (1, 8)	: $3.3 \text{ MHz} < t_{MCLK} \leq 4 \text{ MHz}$
(m, n) = (1, 22), (5, 4)	: $3.3 \text{ MHz} < t_{MCLK} \leq 8 \text{ MHz}$
(m, n) = (6, 4)	: $3.3 \text{ MHz} < t_{MCLK} \leq 10 \text{ MHz}$

14.4.9 UART/SIO, Serial I/O Timing

Analog input voltage	V_{AIN}	V_{SS}	—	V_{CC}	V	

14.5.2 Notes on Using the A/D Converter

■ External impedance of analog input and its sampling time

- The A/D converter has a sample and hold circuit. If the external impedance is too high to keep sufficient sampling time, the analog voltage charged to the capacitor of the internal sample and hold circuit is insufficient, adversely affecting A/D conversion precision. Therefore, to satisfy the A/D conversion precision standard, considering the relationship between the external impedance and minimum sampling time, either adjust the register value and operating frequency or decrease the external impedance so that the sampling time is longer than the minimum value. In addition, if sufficient sampling time cannot be secured, connect a capacitor of about 0.1 μF to the analog input pin.

• Analog input equivalent circuit

During sampling: ON

V_{CC}	R	C
$4.5\text{ V} \leq V_{CC} \leq 5.5\text{ V}$	1.95 k Ω (Max)	17 pF (Max)
$4.0\text{ V} \leq V_{CC} < 4.5\text{ V}$	8.98 k Ω (Max)	17 pF (Max)

Note: The values are reference values.

• Relationship between external impedance and minimum sampling time

[External impedance = 0 k Ω to 100 k Ω]

[External impedance = 0 k Ω to 20 k Ω]

■ A/D conversion error

As $|V_{CC} - V_{SS}|$ decreases, the A/D conversion error increases proportionately.

14.5.3 Definitions of A/D Converter Terms

- Resolution
It indicates the level of analog variation that can be distinguished by the A/D converter. When the number of bits is 10, analog voltage can be divided into $2^{10} = 1024$.
- Linearity error (unit: LSB)
It indicates how much an actual conversion value deviates from the straight line connecting the zero transition point (“00 0000 0000” ← → “00 0000 0001”) of a device to the full-scale transition point (“11 1111 1111” ← → “11 1111 1110”) of the same device.
- Differential linear error (unit: LSB)
It indicates how much the input voltage required to change the output code by 1 LSB deviates from an ideal value.
- Total error (unit: LSB)
It indicates the difference between an actual value and a theoretical value. The error can be caused by a zero transition error, a full-scale transition errors, a linearity error, a quantum error, or noise.

19. Major Changes

Page	Section	Details
1	Features	Changed the main CR clock oscillation accuracy. $\pm 2\% \rightarrow \pm 2\%$ or $\pm 2.5\%$ Added a remark about the main CR clock accuracy.
4	Product Line-up	Added FPT-52P-M02.
5	Packages And Corresponding Products	Added FPT-52P-M02.
6	Differences Among Products And Notes On Product Selection	Added a reference for the connection method in “• On-chip debug function”.
8	Pin Assignment	Added the pin assignment diagram of FPT-52P-M02.
10 to 13	Pin Functions	Added the pin numbers of FPT-52P-M02.
34	Electrical Characteristics AC Characteristics Clock Timing	Changed the values of clock frequency (F_{CRH}). Added conditions related to the LQFP package and the QFN package for the values of clock frequency (F_{CRH}). Added footnotes *2 and *3.
58 to 63	Sample Characteristics	Added “Sample Characteristics”.
65	Ordering Information	Added the part numbers of FPT-52P-M02.
67	Package Dimension	Added the package diagram of FPT-52P-M02.

Cypress reserves all rights under such laws and treaties and does not, except as specifically stated in this paragraph, grant any license under its patents, copyrights, trademarks, or other intellectual property rights. If the Software is not accompanied by a license agreement and you do not otherwise have a written agreement with Cypress governing the use of the Software, then Cypress hereby grants you under its copyright rights in the Software, a personal, non-exclusive, nontransferable license (without the right to sublicense) (a) for Software provided in source code form, to modify and reproduce the Software solely for use with Cypress hardware products, only internally within your organization, and (b) to distribute the Software in binary code form externally to end users (either directly or indirectly through resellers and distributors), solely for use on Cypress hardware product units. Cypress also grants you a personal, non-exclusive, nontransferable, license (without the right to sublicense) under those claims of Cypress's patents that are infringed by the Software (as provided by Cypress, unmodified) to make, use, distribute, and import the Software solely to the minimum extent that is necessary for you to exercise your rights under the copyright license granted in the previous sentence. Any other use, reproduction, modification, translation, or compilation of the Software is prohibited.

CYPRESS MAKES NO WARRANTY OF ANY KIND, EXPRESS OR IMPLIED, WITH REGARD TO THIS DOCUMENT OR ANY SOFTWARE, INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE. Cypress reserves the right to make changes to this document without further notice. Cypress does not assume any liability arising out of the application or use of any product or circuit described in this document. Any information provided in this document, including any sample design information or programming code, is provided only for reference purposes. It is the responsibility of the user of this document to properly design, program, and test the functionality and safety of any application made of this information and any resulting product. Cypress products are not designed, intended, or authorized for use as critical components in systems designed or intended for the operation of weapons, weapons systems, nuclear installations, life-support devices or systems, other medical devices or systems (including resuscitation equipment and surgical implants), pollution control or hazardous substances management, or other uses where the failure of the device or system could cause personal injury, death, or property damage ("Unintended Uses"). A critical component is any component of a device or system whose failure to perform can be reasonably expected to cause the failure of the device or system, or to affect its safety or effectiveness. Cypress is not liable, in whole or in part, and Company shall and hereby does release Cypress from any claim, damage, or other liability arising from or related to all Unintended Uses of Cypress products. Company shall indemnify and hold Cypress harmless from and against all claims, costs, damages, and other liabilities, including claims for personal injury or death, arising from or related to any Unintended Uses of Cypress products.
